

Vendra

Getting started · Mise en route

Point of sale, catalogue, team and files — in one calm app.
Caisse, catalogue, équipe et fichiers — dans une seule appli.

A step-by-step guide for complete beginners. No experience needed.
Un guide étape par étape pour les vrais débutants. Aucune expérience requise.

Guide — October 2026

Start here — read this first / Commencez ici — lisez ceci d'abord

Welcome! This guide shows you how to use **Vendra**, one small step at a time. You do not need to know anything about computers. Just follow the steps in order, and look at the pictures.

Bienvenue! Ce guide vous montre comment utiliser **Vendra**, un petit pas à la fois. Vous n'avez pas besoin de connaître les ordinateurs. Suivez les étapes dans l'ordre, et regardez les images.

What you need / Ce qu'il vous faut

- A phone, a tablet, or a computer. Any of them works.
- An internet connection. The shop lives on the internet, so your device must be connected.
- The shop's web address (the link you were given when the shop was set up). Keep it somewhere safe — you will type it or tap it every time you open the shop.
- Un téléphone, une tablette ou un ordinateur. N'importe lequel convient.
- Une connexion Internet. La boutique vit sur Internet, donc votre appareil doit être connecté.
- L'adresse Web de la boutique (le lien qu'on vous a donné à l'installation). Gardez-la en lieu sûr — vous la taperez ou la toucherez chaque fois que vous ouvrez la boutique.

Words we use in this guide / Les mots utilisés dans ce guide

Every new word is explained here, in plain language. If a word further down is new to you, come back to this list.

Chaque nouveau mot est expliqué ici, en langage simple. Si un mot plus loin est nouveau pour vous, revenez à cette liste.

Internet — the worldwide network that connects devices; it is how your shop talks to its saved information. **Internet** — le réseau mondial qui relie les appareils; c'est comme ça que votre boutique parle à ses informations enregistrées.

Wi-Fi — the wireless way your device connects to the internet at home or at work — it is the signal with the fan-shaped icon. **Wi-Fi** — la façon sans fil de brancher votre appareil à Internet à la maison ou au travail — c'est le signal avec l'icône en forme d'éventail.

Browser — the app you use to visit pages on the internet (it is called Chrome, Safari, Edge or Firefox on most devices). **Navigateur** — l'appli qui sert à visiter des pages sur Internet (elle s'appelle Chrome, Safari, Edge ou Firefox sur la plupart des appareils).

Web address (a "link") — the shop's address on the internet, like an address for a house. Typing it or tapping it takes you to the shop. **Adresse Web (un « lien »)** — l'adresse de la boutique sur Internet, comme l'adresse d'une maison. La taper ou la toucher vous amène à la boutique.

Tap / click — "tap" means touch once with a finger on a screen; "click" means press once with a mouse. They do the same thing. **Toucher / cliquer** — « toucher » veut dire toucher une fois du doigt sur un écran; « cliquer » veut dire appuyer une fois avec une souris. Ça fait la même chose.

Sign in — telling the shop who you are, so it shows your shop and keeps other people out. **Se connecter** — dire à la boutique qui vous êtes, pour qu'elle montre votre boutique et garde les autres dehors.

Password — a secret word only you know. You type it when you sign in, like a key for a lock. **Mot de passe** — un mot secret que vous êtes le seul à connaître. Vous le tapez à la connexion, comme une clé pour une serrure.

Settings — the place where you change how the shop behaves — like the dials on a machine. **Réglages** — l'endroit où vous changez la façon dont la boutique se comporte — comme les boutons sur une machine.

Download — saving a copy of a file from the internet onto your device, so you keep it.

Télécharger — enregistrer une copie d'un fichier depuis Internet sur votre appareil, pour la garder.

Backup — a safety copy of everything in your shop. If something goes wrong, the backup can put it back. **Sauvegarde** — une copie de sécurité de tout ce qui est dans votre boutique. Si quelque chose va mal, la sauvegarde peut tout remettre.

The cloud — a short way of saying “saved safely on the internet” instead of only on your device.

Le nuage (infonuagique) — une façon courte de dire « enregistré en sécurité sur Internet » plutôt que seulement sur votre appareil.

Opening your shop for the first time / Ouvrir votre boutique pour la première fois

Step 1. Find the browser icon on your device and tap it. (Look for Chrome, Safari, Edge or Firefox.)

Étape 1. Trouvez l'icône du navigateur sur votre appareil et touchez-la. (Cherchez Chrome, Safari, Edge ou Firefox.)

Step 2. Tap the address bar — the long box at the top of the browser where addresses go.

Étape 2. Touchez la barre d'adresse — la longue boîte en haut du navigateur où vont les adresses.

■ Screenshot — The address bar at the top of the browser

Capture d'écran — La barre d'adresse en haut du navigateur

(task-start-address.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Step 3. Type the shop's web address exactly as it was given to you, then press Enter (or tap Go).

Étape 3. Tapez l'adresse Web de la boutique exactement comme on vous l'a donnée, puis appuyez sur Entrée (ou touchez Aller).

You should now see: a page that says it is checking the connection, then the sign-in screen.

Vous devriez maintenant voir : une page qui dit qu'elle vérifie la connexion, puis l'écran de connexion.

If something goes wrong

If the page says it cannot reach the shop: check that Wi-Fi is on (look for the fan-shaped icon), then tap Retry. If it still fails, wait a minute and try again — the internet itself may be down.

Si quelque chose ne va pas

Si la page dit qu'elle ne peut pas joindre la boutique : vérifiez que le Wi-Fi est actif (cherchez l'icône en éventail), puis touchez Réessayer. Si ça échoue encore, attendez une minute et réessayez — Internet lui-même est peut-être en panne.

Keeping the shop one tap away / Garder la boutique à un toucher

So you do not have to type the address every time, save it once:

Pour ne pas avoir à taper l'adresse chaque fois, enregistrez-la une fois :

Step 1. Open the shop in your browser (see above).

Step 2. On a computer: press Ctrl+D (Windows) or Cmd+D (Mac) to bookmark it. On a phone or tablet: open the browser menu (three dots or a share icon) and tap “Add to Home screen” (or “Add bookmark”).

Step 3. From now on, tap that bookmark or the new home-screen icon to open the shop.

Étape 1. Ouvrez la boutique dans votre navigateur (voir ci-dessus).

Étape 2. Sur un ordinateur : appuyez sur Ctrl+D (Windows) ou Cmd+D (Mac) pour l'ajouter aux favoris. Sur un téléphone ou une tablette : ouvrez le menu du navigateur (trois points ou icône de partage) et touchez « Ajouter à l'écran d'accueil » (ou « Ajouter un favori »).

Étape 3. À partir de maintenant, touchez ce favori ou la nouvelle icône sur l'écran d'accueil pour ouvrir la boutique.

■ Screenshot — The browser menu with “Add to Home screen”

Capture d'écran — Le menu du navigateur avec « Ajouter à l'écran d'accueil »

(task-start-bookmark.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Your first day, step by step / Votre première journée, étape par étape

Do these tasks in order the first time. Later, jump straight to the one you need. Suivez ces tâches dans l'ordre la première fois. Plus tard, allez directement à celle qu'il vous faut.

Task 1 — Sign in for the first time / Tâche 1 — Se connecter pour la première fois

When the shop is new, it has one built-in account: the master account. Its username is **admin** and its first password is **admin123**. You will only use that password once — the shop makes you choose your own right away.

Quand la boutique est neuve, elle a un seul compte intégré : le compte maître. Son nom d'utilisateur est **admin** et son premier mot de passe est **admin123**. Vous n'utiliserez ce mot de passe qu'une fois — la boutique vous force à choisir le vôtre tout de suite.

Step 1. Open the shop (see “Start here”).

Step 2. In the username box, type **admin**.

Step 3. In the password box, type **admin123**.

Step 4. Tap **Sign in**.

■ Screenshot — The sign-in screen with admin typed in
Capture d'écran — L'écran de connexion avec admin tapé

(task1-signin.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: a box asking you to choose a new password. The shop will not open until you do — this is on purpose, so nobody can keep using the first password.

Step 5. Type a new password of your own. Make it at least 8 characters, and not something easy to guess (not your name, not 123456).

Step 6. Type the same new password again in the second box.

Step 7. Tap the confirm button.

■ Screenshot — The “choose a new password” box
Capture d'écran — La boîte « choisir un nouveau mot de passe »

(task1-newpassword.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: the shop's main screen (the desktop), with icons for the different parts of the shop.

Étape 1. Ouvrez la boutique (voir « Commencez ici »).

Étape 2. Dans la boîte du nom d'utilisateur, tapez **admin**.

Étape 3. Dans la boîte du mot de passe, tapez **admin123**.

Étape 4. Touchez **Se connecter**.

Vous devriez maintenant voir : une boîte qui demande de choisir un nouveau mot de passe. La boutique ne s'ouvrira pas avant — c'est fait exprès, pour que personne ne puisse garder le premier mot de passe.

Étape 5. Tapez un nouveau mot de passe à vous. Au moins 8 caractères, et pas facile à deviner (pas votre nom, pas 123456).

Étape 6. Tapez le même nouveau mot de passe dans la deuxième boîte.

Étape 7. Touchez le bouton de confirmation.

Vous devriez maintenant voir : l'écran principal de la boutique (le bureau), avec les icônes des différentes parties de la boutique.

If something goes wrong

“This is a problem with how the system was set up — not your password.” Your password was never even checked. The shop’s own connection settings are wrong. Retyping your password will not help — tell the person who installed the shop.

If your new password is refused: make it longer, and avoid common or repeating words.

Si quelque chose ne va pas

« **C’est un problème de configuration du système — pas votre mot de passe.** » Votre mot de passe n’a même pas été vérifié. Les réglages de connexion de la boutique sont erronés. Retaper votre mot de passe ne changera rien — dites-le à la personne qui a installé la boutique.

Si votre nouveau mot de passe est refusé : allongez-le, et évitez les mots courants ou répétitifs.

Task 2 — Tell the shop what kind of business you run / Tâche 2 — Dites à la boutique quel genre de commerce vous avez

Every shop is a little different. A restaurant needs tables and tips; a repair shop needs appointments. Instead of changing screens one by one, you pick one **business type** and the shop sets itself up for you. You can change it later — nothing is lost.

Chaque commerce est un peu différent. Un restaurant a besoin de tables et de pourboires; un atelier de réparation, de rendez-vous. Au lieu de changer les écrans un par un, vous choisissez un **type de commerce** et la boutique se règle pour vous. Vous pouvez le changer plus tard — rien n’est perdu.

Step 1. Sign in with the master account (the one from Task 1 — username **admin**, with the password you chose in Task 1).

Step 2. Open **Settings**.

Step 3. Find **Business type** and tap it.

■ Screenshot — Settings with “Business type”

Capture d’écran — Réglages avec « Type de commerce »

(task2-businessstype.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: a short list of business types: General, Retail, Restaurant / Food, Services / Appointments, Convenience / Fuel.

Step 4. Tap the one that matches your shop. Not sure? Pick **General** — you can change it later.

Step 5. If the shop asks “Apply?”, tap **Apply**.

■ **Screenshot — The business type list**
Capture d’écran — La liste des types de commerce

(task2-presetlist.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: the shop set up for your kind of business (for example, a restaurant sees tables; a repair shop sees appointments up front).

Étape 1. Connectez-vous avec le compte maître (celui de la tâche 1 — nom d'utilisateur **admin**, avec le mot de passe que vous avez choisi à la tâche 1).

Étape 2. Ouvrez **Réglages**.

Étape 3. Trouvez **Type de commerce** et touchez-le.

Vous devriez maintenant voir : une courte liste de types de commerce : Général, Détail, Restaurant / Nourriture, Services / Rendez-vous, Dépanneur / Essence.

Étape 4. Touchez celui qui correspond à votre commerce. Pas sûr? Choisissez **Général** — vous pourrez changer plus tard.

Étape 5. Si la boutique demande « Appliquer? », touchez **Appliquer**.

Vous devriez maintenant voir : la boutique réglée pour votre genre de commerce (par exemple, un restaurant voit les tables; un atelier voit les rendez-vous bien en vue).

If something goes wrong

If you do not see “Business type”: you may not be signed in with the master account. Sign out, then sign in as **admin** with the password you chose in Task 1.

Picked the wrong type? Do Task 2 again and pick another. Products, sales and customers are never deleted by changing types.

Si quelque chose ne va pas

Si vous ne voyez pas « Type de commerce » : vous n’êtes peut-être pas connecté avec le compte maître. Déconnectez-vous, puis reconnectez-vous comme **admin** avec le mot de passe choisi à la tâche 1.

Mauvais type choisi? Refaites la tâche 2 et choisissez-en un autre. Les produits, ventes et clients ne sont jamais effacés quand on change de type.

Task 3 — Add a product you sell / Tâche 3 — Ajouter un produit que vous vendez

The shop can only sell what it knows. Add each product once; after that, selling it takes two taps.

La boutique ne peut vendre que ce qu'elle connaît. Ajoutez chaque produit une fois; ensuite, le vendre prend deux touches.

Step 1. From the main screen, open **Point of Sale**.

Step 2. Tap **Add product**.

■ Screenshot — The “Add product” button in Point of Sale
Capture d’écran — Le bouton « Ajouter un produit » dans le Point de vente
(task3-addproduct.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: a form with empty boxes for the product's name and price.

Step 3. Type the product's name (for example: Coffee).

Step 4. Type its price (for example: 2.50). Use a dot, not a comma, for cents.

Step 5. If you keep stock (how many you have), type the number you have now. If not, leave it empty.

Step 6. Tap **Save**.

■ Screenshot — The product form, filled in
Capture d’écran — Le formulaire de produit, rempli
(task3-productform.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: your product, with its price, in the grid of products.

Étape 1. À partir de l’écran principal, ouvrez **Point de vente**.

Étape 2. Touchez **Ajouter un produit**.

Vous devriez maintenant voir : un formulaire avec des boîtes vides pour le nom et le prix du produit.

Étape 3. Tapez le nom du produit (par exemple : Café).

Étape 4. Tapez son prix (par exemple : 2,50). Utilisez un point, pas une virgule, pour les cents.

Étape 5. Si vous suivez l'inventaire (combien vous en avez), tapez le nombre que vous avez maintenant. Sinon, laissez vide.

Étape 6. Touchez **Enregistrer**.

Vous devriez maintenant voir : votre produit, avec son prix, dans la grille des produits.

If something goes wrong

If the product does not appear: check that you tapped Save, and that you are looking at the Point of Sale (not the Catalogue — they are two different lists).

Price looks wrong (250 instead of 2.50)? You typed the price in cents. Edit the product and type 2.50.

Si quelque chose ne va pas

Si le produit n'apparaît pas : vérifiez que vous avez touché Enregistrer, et que vous regardez bien le Point de vente (pas le Catalogue — ce sont deux listes différentes).

Le prix semble faux (250 au lieu de 2,50)? Vous avez tapé le prix en cents. Modifiez le produit et tapez 2.50.

Task 4 — Make a cash sale / Tâche 4 — Faire une vente comptant

“Cash sale” means the customer pays you with money (not a card). The shop records the sale either way.

« Vente comptant » veut dire que le client vous paie en argent (pas par carte). La boutique enregistre la vente de toute façon.

Step 1. Open **Point of Sale**.

Step 2. Tap the product the customer is buying (for example: Coffee).

You should now see: the product appears in the list on the side (the “cart” — what the customer is buying), and the total goes up.

Step 3. Buying more than one? Tap the product again, or tap the + next to it in the cart.

Step 4. When everything is in the cart, tap the big **Pay / Charge** button.

■ Screenshot — Point of Sale with one product in the cart
Capture d'écran — Le Point de vente avec un produit dans le panier

(task4-posgrid.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: the payment screen, asking how the customer pays.

Step 5. Tap **Cash**.

Step 6. Type how much money the customer hands you (or tap the exact amount).

Step 7. Tap **Complete sale**.

■ Screenshot — The payment screen with Cash chosen
Capture d'écran — L'écran de paiement avec Comptant choisi

(task4-pay.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: a receipt, and the change to give back (if any). The sale is saved right away.

Step 8. Hand the customer their change, and the receipt if they want it. Done!

Étape 1. Ouvrez **Point de vente**.

Étape 2. Touchez le produit que le client achète (par exemple : Café).

Vous devriez maintenant voir : le produit apparaît dans la liste sur le côté (le « panier » — ce que le client achète), et le total monte.

Étape 3. Plus d'un? Touchez le produit encore, ou touchez le + à côté de lui dans le panier.

Étape 4. Quand tout est dans le panier, touchez le gros bouton **Payer**.

Vous devriez maintenant voir : l'écran de paiement, qui demande comment le client paie.

Étape 5. Touchez **Comptant**.

Étape 6. Tapez combien d'argent le client vous donne (ou touchez le montant exact).

Étape 7. Touchez **Terminer la vente**.

Vous devriez maintenant voir : un reçu, et la monnaie à remettre (s'il y en a). La vente est enregistrée tout de suite.

Étape 8. Remettez la monnaie au client, et le reçu s'il le veut. Terminé!

If something goes wrong

Tapped the wrong product? In the cart, tap the – (minus) to remove one, or the trash icon to remove it completely, before you pay.

If the sale stops with a “could not reach the shop” message: the internet dropped. Your cart is still there — see Task 10. No money was taken.

Si quelque chose ne va pas

Mauvais produit touché? Dans le panier, touchez le – (moins) pour en enlever un, ou l'icône de poubelle pour l'enlever au complet, avant de payer.

Si la vente s'arrête avec un message « impossible de joindre la boutique » : Internet a coupé. Votre panier est toujours là — voir la tâche 10. Aucun argent n'a été pris.

Task 5 — Give a refund / Tâche 5 — Faire un remboursement

A refund gives the customer their money back for something they bought. You find the sale first, then refund it.

Un remboursement redonne au client son argent pour quelque chose qu'il a acheté. On trouve d'abord la vente, puis on la rembourse.

Step 1. Open Point of Sale.

Step 2. Tap History.

■ Screenshot — The History list of past sales

Capture d'écran — La liste Historique des ventes passées

(task5-history.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: the list of past sales, newest first.

Step 3. Tap the sale you want to refund.

You should now see: the details of that sale.

Step 4. Tap Refund.

Step 5. Check the amount. If only part is being returned, change the quantity to what came back.

Step 6. You may type a reason (why it came back). You can also leave it empty.

Step 7. Tap Confirm refund.

■ Screenshot — The refund box for a sale

Capture d'écran — La boîte de remboursement d'une vente

(task5-refund.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: the sale in History now shows it was refunded. Refunded sales cannot be voided (deleted) afterwards — this is on purpose, so the record stays honest.

Étape 1. Ouvrez Point de vente.

Étape 2. Touchez Historique.

Vous devriez maintenant voir : la liste des ventes passées, les plus récentes en premier.

Étape 3. Touchez la vente à rembourser.

Vous devriez maintenant voir : les détails de cette vente.

Étape 4. Touchez Rembourser.

Étape 5. Vérifiez le montant. Si seulement une partie revient, changez la quantité pour ce qui est revenu.

Étape 6. Vous pouvez taper une raison (pourquoi c'est revenu). Vous pouvez aussi laisser vide.

Étape 7. Touchez Confirmer le remboursement.

Vous devriez maintenant voir : la vente dans l'Historique montre maintenant qu'elle a été remboursée. Une vente remboursée ne peut plus être annulée (effacée) — c'est fait exprès, pour que le registre reste honnête.

If something goes wrong

Can't find the sale? Check you are signed in to the right shop, and scroll — History is newest first.

Refund button missing? Only owners and managers can refund. Ask the person with the master account.

Si quelque chose ne va pas

Vente introuvable? Vérifiez que vous êtes connecté à la bonne boutique, et faites défiler — l'Historique met les plus récentes en premier.

Bouton Rembourser absent? Seuls les propriétaires et gérants peuvent rembourser. Demandez à la personne qui a le compte maître.

Task 6 — Put your shop on the web (the public page) / Tâche 6 — Mettre votre boutique sur le Web (la page publique)

Your shop can have a simple page on the web that anyone can look at: your shop name, what you sell, your hours and how to reach you. Products you add in the Point of Sale appear on the page by themselves — you do not type them twice. This page is a shop window, not a full website: visitors cannot buy online there.

Votre boutique peut avoir une page simple sur le Web que tout le monde peut regarder : le nom de votre boutique, ce que vous vendez, vos heures et comment vous joindre. Les produits ajoutés dans le Point de vente apparaissent sur la page tout seuls — vous ne les tapez pas deux fois. Cette page est une vitrine, pas un site Web complet : les visiteurs ne peuvent pas acheter en ligne.

Step 1. Sign in with the master account, or as the shop's owner/manager.

Step 2. Open the **Admin** panel.

Step 3. Tap the **Storefront** tab.

■ Screenshot — The Admin panel, Storefront tab

Capture d'écran — Le panneau Admin, onglet Vitrine

(task6-storefronttab.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: boxes for your public shop name, a short line about your shop ("About"), opening hours, email, phone, and a colour.

Step 4. Fill in the boxes. Write them for strangers: what you sell, where you are, when you are open.

Step 5. In the web address box, choose your shop's address: small letters, numbers and dashes only (for example my - shop). Your full public link ends with #/store/my - shop.

Step 6. Turn on **Page is published**.

Step 7. Tap **Save**.

■ **Screenshot — “Page is published” turned on, with the Save button**
Capture d’écran — « La page est publiée » activé, avec le bouton Enregistrer
(task6-publish.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: your public link, ready to copy.

Step 8. Tap the link (or copy it) to look at your page the way customers see it.

■ **Screenshot — The public page customers see**
Capture d’écran — La page publique que les clients voient
(task6-publicpage.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: your shop page, with your products. (To keep one product off the page: in its product settings, set it to Hidden. To hide all prices: turn off “Show prices” in the Storefront tab.)

Étape 1. Connectez-vous avec le compte maître, ou comme propriétaire/gérant de la boutique.

Étape 2. Ouvrez le panneau **Admin**.

Étape 3. Touchez l’onglet **Vitrine**.

Vous devriez maintenant voir : des boîtes pour le nom public de votre boutique, une courte description (« À propos »), les heures d’ouverture, le courriel, le téléphone, et une couleur.

Étape 4. Remplissez les boîtes. Écrivez pour des inconnus : ce que vous vendez, où vous êtes, quand vous êtes ouvert.

Étape 5. Dans la boîte d’adresse Web, choisissez l’adresse de votre boutique : lettres minuscules, chiffres et tirets seulement (par exemple ma - boutique). Votre lien public complet se termine par #/store/ma - boutique.

Étape 6. Activez **La page est publiée**.

Étape 7. Touchez **Enregistrer**.

Vous devriez maintenant voir : votre lien public, prêt à copier.

Étape 8. Touchez le lien (ou copiez-le) pour voir votre page comme les clients la voient.

Vous devriez maintenant voir : votre page de boutique, avec vos produits. (Pour retirer un produit de la page : dans ses réglages de produit, mettez-le à Masqué. Pour cacher tous les prix : désactivez « Afficher les prix » dans l’onglet Vitrine.)

If something goes wrong

The link says “not available yet”: “Page is published” is off, or you did not tap Save after turning it on. Go back to the Storefront tab and check both.

A product is missing from the page: it is set to Hidden in its product settings, or it is only in the Catalogue (the public page shows Point of Sale products).

Si quelque chose ne va pas

Le lien dit « pas encore disponible » : « La page est publiée » est désactivé, ou vous n’avez pas touché Enregistrer après l’avoir activé. Retournez à l’onglet Vitrine et vérifiez les deux.

Un produit manque sur la page : il est à Masqué dans ses réglages de produit, ou il est seulement dans le Catalogue (la page publique montre les produits du Point de vente).

Task 7 — Make the till easy to touch (tablets and phones) / Tâche 7 — Rendre la caisse facile à toucher (tablettes et téléphones)

If your till is a tablet or a phone, small buttons are hard to tap. This setting makes buttons bigger and the home screen simpler, like a phone’s. Turn it on for each device that needs it — it only changes that device.

Si votre caisse est une tablette ou un téléphone, les petits boutons sont difficiles à toucher. Ce réglage grossit les boutons et simplifie l’écran d’accueil, comme un téléphone. Activez-le sur chaque appareil qui en a besoin — ça ne change que cet appareil-là.

Step 1. Open **Settings**.

Step 2. Tap **Appearance**.

Step 3. Turn on **Touch screen optimization**.

■ Screenshot — “Touch screen optimization” in Settings · Appearance

Capture d’écran — « Optimisation tactile » dans Réglages · Apparence

(task7-touchtoggle.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

You should now see: the home screen changes: big icons, apps open full-screen, and buttons everywhere are bigger.

Step 4. Try it: open the Point of Sale and tap a product. Buttons should be easy to hit with a finger.

Step 5. Want it back the old way? Repeat steps 1–3 and turn it off.

■ Screenshot — The touch home screen, with big icons
Capture d'écran — L'écran d'accueil tactile, avec de grosses icônes

(task7-touchhome.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Étape 1. Ouvrez **Réglages**.

Étape 2. Touchez **Apparence**.

Étape 3. Activez **Optimisation tactile**.

Vous devriez maintenant voir : l'écran d'accueil change : grosses icônes, applis en plein écran, et des boutons plus gros partout.

Étape 4. Essayez : ouvrez le Point de vente et touchez un produit. Les boutons devraient être faciles à toucher du doigt.

Étape 5. Pour revenir comme avant : refaites les étapes 1 à 3 et désactivez.

If something goes wrong

Nothing changed? The setting applies to this device only, and the home screen changes first. If the till still shows the desktop-style home screen, close and reopen the shop (see “Start here”).

Si quelque chose ne va pas

Rien n'a changé? Le réglage s'applique à cet appareil seulement, et c'est l'écran d'accueil qui change d'abord. Si la caisse montre encore l'accueil style bureau, fermez et rouvrez la boutique (voir « Commencez ici »).

Task 8 — Save a backup (do this regularly) / Tâche 8 — Faire une sauvegarde (faites-le régulièrement)

A backup is one file that holds everything in your account: products, sales, customers, settings. Save one regularly — for example every Friday — and keep the file somewhere safe, like a USB key or your email. If anything ever goes badly wrong, this file is how you get your shop back.

Une sauvegarde est un seul fichier qui contient tout votre compte : produits, ventes, clients, réglages. Faites-en une régulièrement — par exemple chaque vendredi — et gardez le fichier en lieu sûr, comme une clé USB ou votre courriel. Si quelque chose tourne vraiment mal un jour, c'est ce fichier qui ramène votre boutique.

Step 1. Open **Settings**.

Step 2. Tap **Data**.

Step 3. Tap **Download backup** (account backup).

■ Screenshot — The backup button in Settings · Data
Capture d'écran — Le bouton de sauvegarde dans Réglages · Données

(task8-backup.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: a file named like `drift-backup-2026-10-01.json` downloading to your device.

Step 4. Find the downloaded file (usually in your Downloads folder) and copy it somewhere safe. That is it — done.

Étape 1. Ouvrez **Réglages**.

Étape 2. Touchez **Données**.

Étape 3. Touchez **Télécharger la sauvegarde** (sauvegarde du compte).

Vous devriez maintenant voir : un fichier nommé comme `drift-backup-2026-10-01.json` qui se télécharge sur votre appareil.

Étape 4. Trouvez le fichier téléchargé (habituellement dans votre dossier Téléchargements) et copiez-le en lieu sûr. C'est tout — terminé.

If something goes wrong

No file appeared? Some browsers block downloads. Look for a small blocked-download icon near the address bar, allow the download, and try again.

The backup file contains private things (like staff PIN numbers). Keep it like you would keep keys: do not share it publicly.

Si quelque chose ne va pas

Aucun fichier n'est apparu? Certains navigateurs bloquent les téléchargements. Cherchez une petite icône de téléchargement bloqué près de la barre d'adresse, autorisez le téléchargement, et réessayez.

Le fichier de sauvegarde contient des choses privées (comme les NIP du personnel). Gardez-le comme des clés : ne le partagez pas publiquement.

Task 9 — Start completely over (factory reset) / Tâche 9 — Tout recommencer à zéro (réinitialisation d'usine)

Warning first. A factory reset **deletes everything and everyone**: all accounts, products, sales, customers, appointments, files — gone, as if the shop was brand new. **There is no undo.** Only do this if you truly want to start over, or hand the shop to someone else completely empty. Only the master account (username **admin**, with the password you chose in Task 1) can do it.

Attention d'abord. Une réinitialisation d'usine **efface tout et tout le monde** : tous les comptes, produits, ventes, clients, rendez-vous, fichiers — disparus, comme si la boutique était neuve. **Aucun retour en arrière.** Faites-le seulement si vous voulez vraiment recommencer, ou remettre la boutique à quelqu'un d'autre complètement vide. Seul le compte maître (nom d'utilisateur **admin**, avec le mot de passe choisi à la tâche 1) peut le faire.

Step 1. First, do Task 8 (download a backup) and keep the file safe. After a reset, that file is the only way back.

Step 2. Sign in as **admin** (master account).

Step 3. Open the **Admin** panel.

Step 4. Scroll to the **Danger zone** at the bottom.

Step 5. Tap **Factory reset**.

■ Screenshot — The Danger zone with the Factory reset button

Capture d'écran — La Zone danger avec le bouton Réinitialisation d'usine

(task9-dangerzone.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: a warning box. Before anything is deleted, the shop saves one last backup by itself and downloads it. If that backup fails, the reset stops and nothing is deleted.

Step 6. Read the warning. Then type the word **RESET** (in capital letters) in the box.

You should now see: the reset button lights up. It stays off until the word is typed exactly right — this is on purpose, so nobody can tap it by accident.

Step 7. Tap the reset button, and confirm.

■ Screenshot — Typing RESET to arm the reset button

Capture d'écran — Taper RESET pour armer le bouton de réinitialisation

(task9-typereset.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: you are signed out. The shop is empty and new. Sign in again with **admin / admin123** and pick a new password (same as Task 1).

Étape 1. D'abord, faites la tâche 8 (télécharger une sauvegarde) et gardez le fichier en sécurité. Après une réinitialisation, ce fichier est le seul retour possible.

Étape 2. Connectez-vous comme **admin** (compte maître).

Étape 3. Ouvrez le panneau **Admin**.

Étape 4. Faites défiler jusqu'à la **Zone danger** en bas.

Étape 5. Touchez **Réinitialisation d'usine**.

Vous devriez maintenant voir : une boîte d'avertissement. Avant que quoi que ce soit soit effacé, la boutique fait une dernière sauvegarde toute seule et la télécharge. Si cette sauvegarde échoue, la réinitialisation s'arrête et rien n'est effacé.

Étape 6. Lisez l'avertissement. Puis tapez le mot **RESET** (en lettres majuscules) dans la boîte.

Vous devriez maintenant voir : le bouton de réinitialisation s'allume. Il reste éteint tant que le mot n'est pas tapé exactement — c'est fait exprès, pour que personne ne le touche par accident.

Étape 7. Touchez le bouton de réinitialisation, et confirmez.

Vous devriez maintenant voir : vous êtes déconnecté. La boutique est vide et neuve.

Reconnectez-vous avec **admin / admin123** et choisissez un nouveau mot de passe (comme à la tâche 1).

If something goes wrong

The reset button stays off: the word must be exactly RESET, all capitals, no spaces. Check Caps Lock.

“PRE-RESET BACKUP FAILED”: the safety backup could not be saved, so the reset did not happen and nothing was deleted. Do Task 8 by hand, then try again.

Si quelque chose ne va pas

Le bouton reste éteint : le mot doit être exactement RESET, tout en majuscules, sans espaces. Vérifiez le verrouillage des majuscules.

« PRE-RESET BACKUP FAILED » : la sauvegarde de sécurité n'a pas pu être enregistrée, donc la réinitialisation n'a pas eu lieu et rien n'a été effacé. Faites la tâche 8 à la main, puis réessayez.

Task 10 — When a sale fails because the internet dropped / Tâche 10 — Quand une vente échoue parce qu'Internet a coupé

Your shop lives on the internet. Every sale is recorded on the internet the moment it happens. If the internet drops in the middle of a sale, the sale cannot finish. Here is exactly what happens, and what to do. Good news first: **nobody is charged**, and **your cart (what the customer is buying) stays on the screen**. Nothing is lost.

Votre boutique vit sur Internet. Chaque vente est enregistrée sur Internet au moment où elle se fait. Si Internet coupe au milieu d'une vente, la vente ne peut pas finir. Voici exactement ce qui se passe, et quoi faire. La bonne nouvelle d'abord : **personne n'est facturé**, et **votre panier (ce que le client achète) reste à l'écran**. Rien n'est perdu.

Step 1. Read the message on the screen. It will say the shop could not be reached, and the sale did not go through.

■ Screenshot — The “could not reach the shop” message at checkout
Capture d'écran — Le message « impossible de joindre la boutique » à l'encaissement

(task10-saleerror.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

You should now see: your cart is still there, with every item, exactly as it was.

Step 2. Check the Wi-Fi: look for the fan-shaped icon on the device. If it is missing or has an “!”, the device lost the internet.

Step 3. Wait for the internet to come back (the icon returns). This can take a minute after an outage.

Step 4. Tap **Retry** (or complete the sale again, the same way as Task 4).

You should now see: the receipt, like a normal sale. The sale is recorded once — retrying does not charge twice.

Étape 1. Lisez le message à l'écran. Il dira que la boutique n'a pas pu être jointe, et que la vente n'est pas passée.

Vous devriez maintenant voir : votre panier est toujours là, avec chaque article, exactement comme il était.

Étape 2. Vérifiez le Wi-Fi : cherchez l'icône en éventail sur l'appareil. S'il manque ou a un « ! », l'appareil a perdu Internet.

Étape 3. Attendez qu'Internet revienne (l'icône revient). Ça peut prendre une minute après une panne.

Étape 4. Touchez **Réessayer** (ou terminez la vente à nouveau, comme à la tâche 4).

Vous devriez maintenant voir : le reçu, comme une vente normale. La vente est enregistrée une seule fois — réessayer ne facture pas deux fois.

If something goes wrong

If the customer cannot wait: there is no “offline” selling — a sale that never reached the internet simply never happened. Write down what they bought on paper if you like, and ring it in when the internet returns.

If sales keep failing for a long time, the problem is the internet connection or the shop's server — not the till. Tell the person who installed the shop.

Si quelque chose ne va pas

Si le client ne peut pas attendre : il n'y a pas de vente « hors ligne » — une vente qui n'a jamais atteint Internet n'a tout simplement jamais eu lieu. Notez ce qu'il a acheté sur papier si vous voulez, et enregistrez-le quand Internet revient.

Si les ventes échouent longtemps, le problème est la connexion Internet ou le serveur de la boutique — pas la caisse. Dites-le à la personne qui a installé la boutique.

More parts of the shop (in plain words) / Les autres parties de la boutique (en mots simples)

The Catalogue / Le Catalogue

The **Catalogue** is your stock list: what you have, how many, and where it sits on the shelf. It is a different list from the Point of Sale products (Task 3). Something in the Catalogue marked “in store” can be scanned straight into a sale. You can also add many items at once from a spreadsheet file (this is called a CSV file), and look items up by their barcode/ISBN number. Donations, fair days and special orders (a customer asking you to order something in) each have their own simple flow.

Le **Catalogue** est votre liste d'inventaire : ce que vous avez, combien, et où c'est sur l'étagère. C'est une liste différente des produits du Point de vente (tâche 3). Un article du Catalogue marqué « en magasin » peut être scanné directement dans une vente. Vous pouvez aussi ajouter beaucoup d'articles d'un coup à partir d'un fichier de tableur (on appelle ça un fichier CSV), et chercher des articles par leur code-barres/numéro ISBN. Les dons, les journées de foire et les commandes spéciales (un client qui vous demande de commander quelque chose) ont chacun leur façon simple de fonctionner.

Appointments / Rendez-vous

Appointments is a booking book: customers book a time, and two bookings cannot take the same time by accident.

Rendez-vous est un cahier de réservations : les clients réservent une heure, et deux réservations ne peuvent pas prendre la même heure par accident.

Classifieds — your shop's buy-and-sell board / Petites annonces — le babillard d'achat-vente de votre boutique

Classifieds is your shop's own classified-ads board, like a small Kijiji built into your store. Create ads with photos, a price and a description; mark them For sale, Free, Services, Wanted, Jobs, Events or Announcements. Published ads appear on your public storefront, where buyers can save them as favourites. Every ad shows a post number and its posted date, and a safety tip reminds everyone to deal locally and never pay in advance.

Petites annonces, c'est le babillard de petites annonces de votre boutique, comme un petit Kijiji intégré à votre magasin. Créez des annonces avec photos, prix et description; classez-les : À vendre, Gratuit, Services, Recherché, Emplois, Événements ou Annonces. Les annonces publiées apparaissent sur votre vitrine publique, où les acheteurs peuvent les mettre en favoris. Chaque annonce montre un numéro et sa date de publication, et un conseil de sécurité rappelle à tout le monde de faire affaire localement et de ne jamais payer d'avance.

My listings — free ads for everyone / Mes annonces — des annonces gratuites pour tout le monde

Anyone can post **free** local ads — no shop needed. Open **My listings** and post with photos and a price. Free accounts can keep up to 15 ads active and post up to 5 new ads a day; ads stay up for 60

days and can be renewed. Everyone's ads are browsed on the community board, with favourites and a safety tip on every ad. If you outgrow the free limits, the shop plan gives unlimited ads plus the full point of sale.

Tout le monde peut publier des annonces locales **gratuites** — aucune boutique requise. Ouvrez **Mes annonces** et publiez avec photos et prix. Les comptes gratuits peuvent garder jusqu'à 15 annonces actives et publier jusqu'à 5 nouvelles annonces par jour; les annonces restent en ligne 60 jours et peuvent être renouvelées. Les annonces de tout le monde se parcourent sur le babillard communautaire, avec favoris et conseil de sécurité sur chaque annonce. Si les limites gratuites deviennent trop petites, le forfait boutique donne des annonces illimitées plus la caisse complète.

Locked out? Get back in without email / Verrouillé? Reprenez l'accès sans courriel

You never need email to recover your account. At sign-up you receive **recovery codes** — one-time codes to keep somewhere safe (printed, or in a password manager). On the sign-in screen, choose "Forgot password?" then "Use a recovery code" to set a new password. You can also set **security questions** in Settings — Account and answer them on the sign-in screen. Staff: your shop owner or manager can reset your password from the team list — just ask.

Vous n'avez jamais besoin de courriel pour récupérer votre compte. À l'inscription, vous recevez des **codes de récupération** — des codes à usage unique à garder en lieu sûr (imprimés, ou dans un gestionnaire de mots de passe). Sur l'écran de connexion, choisissez « Mot de passe oublié ? » puis « Utiliser un code de récupération » pour définir un nouveau mot de passe. Vous pouvez aussi définir des **questions de sécurité** dans Réglages — Compte et y répondre sur l'écran de connexion. Personnel : le propriétaire ou le gérant de votre boutique peut réinitialiser votre mot de passe depuis la liste de l'équipe — demandez-lui.

Files / Fichiers

Files keeps your documents and pictures in the shop, and you can search the words inside them.

Fichiers garde vos documents et photos dans la boutique, et vous pouvez chercher les mots dedans.

Certificates — the staff time clock / Attestations — la pointeuse du personnel

Staff clock in and out with their own secret number (a PIN — a short number, like a bank card's). Managers can fix a punch, make the schedule (two shifts for the same person cannot overlap), and print attestations — signed papers that prove someone's hours. Volunteer/community hours are kept separate from paid hours. Team members are invited with a code and have a role: Owner (can do everything), Manager (almost everything), Cashier (sells).

Le personnel pointe son arrivée et son départ avec son propre numéro secret (un NIP — un petit numéro, comme celui d'une carte bancaire). Les gérants peuvent corriger un pointage, faire l'horaire (deux quarts pour la même personne ne peuvent pas se chevaucher) et imprimer des attestations — des papiers signés qui prouvent les heures de quelqu'un. Les heures de bénévolat sont gardées séparément des heures payées. Les membres de l'équipe sont invités avec un code et ont un rôle : propriétaire (peut tout faire), gérant (presque tout), caissier (vend).

Taxes — read this before your first real sale / Taxes — à lire avant votre première vraie vente

A new shop charges no tax at all until you set it up. That is on purpose, so nobody is charged the wrong tax. Before selling for real, ask your accountant (the person who does your taxes) two things: what tax percentages apply where you are, and whether each tax is calculated on the price alone, or on price-plus-the-other-tax. Then, in the Point of Sale settings, type those numbers in, and press **Save**. The shop never changes tax numbers by itself. Some organizations pay no tax: they can be marked tax-exempt so their receipts show no tax.

Une boutique neuve ne perçoit aucune taxe tant que vous ne l'avez pas réglée. C'est fait exprès, pour que personne ne paie la mauvaise taxe. Avant de vendre pour vrai, demandez à votre comptable (la personne qui fait vos impôts) deux choses : quels pourcentages de taxe s'appliquent chez vous, et si chaque taxe se calcule sur le prix seulement, ou sur le prix plus l'autre taxe. Ensuite, dans les réglages du Point de vente, tapez ces nombres, et appuyez sur **Enregistrer**. La boutique ne change jamais les nombres de taxe toute seule. Certains organismes ne paient pas de taxe : on peut les marquer exonérés pour que leurs reçus ne montrent aucune taxe.

Other settings / Autres réglages

- Colours and light/dark: Settings · Appearance.
- If someone else changes a setting on another till, your screen picks it up within about a minute. If you are in the middle of typing in a form, your typing is never erased by that.
- When a newer version of the shop is ready, a small message invites you to refresh the page. Nothing is forced on you mid-sale.
- Couleurs et clair/sombre : Réglages · Apparence.
- Si quelqu'un change un réglage sur une autre caisse, votre écran le reçoit en environ une minute. Si vous êtes en train de taper dans un formulaire, ce que vous tapez n'est jamais effacé par ça.
- Quand une nouvelle version de la boutique est prête, un petit message vous invite à actualiser la page. Rien ne vous est imposé au milieu d'une vente.

Online payments — Lemon Squeezy and Stripe / Paiements en ligne — Lemon Squeezy et Stripe

Online payments let customers pay on the internet instead of only at pickup. Vendra does not touch the money itself — you connect your own Lemon Squeezy or Stripe account, and they handle the payment. Vendra adds no fee on top; Lemon Squeezy and Stripe charge their own processing fees.

Les **paiements en ligne** permettent aux clients de payer sur internet au lieu de seulement à la cueillette. Vendra ne touche pas l'argent lui-même — vous connectez votre propre compte Lemon Squeezy ou Stripe, et ce sont eux qui traitent le paiement. Vendra n'ajoute aucun frais ; Lemon Squeezy et Stripe facturent leurs propres frais de traitement.

To set up Lemon Squeezy: (1) Create your store at lemonsqueezy.com. (2) In Lemon Squeezy, go to Settings · Webhooks, create a webhook pointing to the address shown in Vendra, and copy the **signing secret**. (3) In Vendra, go to Admin · Storefront, turn on “Accept online payments via Lemon

Squeezy”, paste your checkout link and the signing secret, then Save. Customers will see a “Pay online” button after placing an order. When they pay, Vendra marks the order as paid automatically.

Pour configurer Lemon Squeezy : (1) Créez votre boutique sur lemonsqueezy.com. (2) Dans Lemon Squeezy, allez à Settings · Webhooks, créez un webhook vers l'adresse indiquée dans Vendra, et copiez le **secret de signature**. (3) Dans Vendra, allez à Admin · Vitrine, activez « Accepter les paiements en ligne via Lemon Squeezy », collez votre lien de paiement et le secret de signature, puis Enregistrez. Les clients verront un bouton « Payer en ligne » après avoir passé commande. Quand ils paient, Vendra marque la commande comme payée automatiquement.

To set up Stripe: (1) Create your account at stripe.com and create a payment link. (2) In Stripe, go to Developers · Webhooks, create an endpoint pointing to the address shown in Vendra, and copy the **signing secret**. (3) In Vendra, go to Admin · Storefront, turn on “Accept online payments via Stripe”, paste your payment link and the signing secret, then Save.

Pour configurer Stripe : (1) Créez votre compte sur stripe.com et créez un lien de paiement. (2) Dans Stripe, allez à Developers · Webhooks, créez un point de terminaison vers l'adresse indiquée dans Vendra, et copiez le **secret de signature**. (3) Dans Vendra, allez à Admin · Vitrine, activez « Accepter les paiements en ligne via Stripe », collez votre lien de paiement et le secret de signature, puis Enregistrez.

The signing secret is what keeps payments safe: Vendra checks every webhook signature before marking an order as paid. Without the correct secret, fake payment notifications are rejected. Never share your webhook secret.

Le secret de signature est ce qui garde les paiements sûrs : Vendra vérifie chaque signature de webhook avant de marquer une commande comme payée. Sans le bon secret, les fausses notifications de paiement sont rejetées. Ne partagez jamais votre secret de webhook.

When something goes wrong / Quand quelque chose ne va pas

This shop is built to fail politely: it explains, it never shows a blank page, and it never silently loses a sale. Here are the bad moments we know about, in plain words.

Cette boutique est faite pour échouer poliment : elle explique, elle ne montre jamais une page vide, et elle ne perd jamais une vente en silence. Voici les mauvais moments que nous connaissons, en mots simples.

The shop cannot be reached at opening / La boutique est injoignable à l'ouverture

- Before opening, the shop checks itself. If its own connection settings look wrong (for example a cut-off key), the screen says the setup looks wrong and that no password will work until whoever installed the shop fixes it. If the settings are fine but the server does not answer, the screen says that instead. Either way there is a **Retry** button — tap it once the internet is back.
- Avant de s'ouvrir, la boutique se vérifie. Si ses propres réglages de connexion semblent erronés (par exemple une clé coupée), l'écran dit que la configuration semble incorrecte et qu'aucun mot

de passe ne fonctionnera tant que la personne qui a installé la boutique ne l'a pas corrigée. Si les réglages sont bons mais que le serveur ne répond pas, l'écran le dit plutôt. Dans les deux cas, il y a un bouton **Réessayer** — touchez-le quand Internet revient.

One part of the shop stops working / Une partie de la boutique arrête de fonctionner

- Each part of the shop is walled off from the others. If one part breaks, only that part shows a message, with a **Retry** button and a short code (like RS-9K2Q1-4F2A). Write the code down and tell whoever looks after the shop — it points straight at the problem. The rest of the shop keeps working. If the shop breaks three times in a row while opening, it starts in a safe mode with repair options instead of breaking again and again.
- Chaque partie de la boutique est séparée des autres. Si une partie brise, elle seule montre un message, avec un bouton **Réessayer** et un petit code (comme RS-9K2Q1-4F2A). Notez le code et dites-le à la personne qui s'occupe de la boutique — il pointe directement au problème. Le reste de la boutique continue de fonctionner. Si la boutique brise trois fois de suite en s'ouvrant, elle démarre en mode sans échec avec des options de réparation au lieu de briser encore et encore.

Dangerous buttons protect you / Les boutons dangereux vous protègent

- Before anything destructive (deleting, voiding a gift card, removing a time punch), the shop quietly saves a small safety copy on the device — the last 3 are kept. That is a safety net, not a backup: still do Task 8 regularly.
- Avant toute action destructive (effacer, annuler une carte-cadeau, enlever un pointage), la boutique enregistre discrètement une petite copie de sécurité sur l'appareil — les 3 dernières sont gardées. C'est un filet de sécurité, pas une sauvegarde : faites quand même la tâche 8 régulièrement.

Getting help / Obtenir de l'aide

- Open **Help & Guide** from the Start menu (the Start menu is the main menu button of the shop) — this guide lives there too. From the sign-in screen, you can also send a support message.
- Ouvrez **Aide & Guide** à partir du menu Démarrer (le menu principal de la boutique) — ce guide s'y trouve aussi. Depuis l'écran de connexion, vous pouvez aussi envoyer un message d'assistance.

Honest limits — what this shop cannot do / Limites honnêtes — ce que cette boutique ne peut pas faire

We would rather tell you the limits than let you discover them. Here they are, plainly.

Nous préférons vous dire les limites plutôt que vous les laissiez découvrir. Les voici, simplement.

- **No internet, no selling.** There is no offline mode on purpose: a sale is only real once it is recorded on the internet. (Task 10 shows what happens.)

- **The public page is a shop window, not a website.** Its look is fixed, and customers cannot buy or pay on it. For a full custom website, you need a website tool as well.
- **Loyalty points are “best effort”.** If the power or internet dies at the exact split second between recording a sale and adding points, the sale is safe but the points might not be added.
- **Brand-new gift card glitch (rare).** If a gift card is sold and the internet drops at that exact moment, the recorded sale can end up pointing at a card that was cancelled during cleanup. If a customer says a brand-new card does not work, look in History first — a manager can void that sale.
- **Your sign-in lives in the browser.** Whoever can open your unlocked browser on your device is, in practice, signed in as you. Sign out on shared devices. There is no list of “which devices are signed in”: signing out works on that device, and if the master account resets your password, you are signed out everywhere at once.
- **Safety copies live on the same device.** If the device is lost or wiped, they are gone. Your downloaded backup file (Task 8) is the copy that lives elsewhere — keep it.
- **Taxes start at zero.** Until you set them (see “Taxes” above), no tax is charged at all. Ask your accountant before real selling.
- **Pas d’Internet, pas de vente.** Il n’y a pas de mode hors ligne, fait exprès : une vente n’est réelle qu’une fois enregistrée sur Internet. (La tâche 10 montre ce qui se passe.)
- **La page publique est une vitrine, pas un site Web.** Son apparence est fixe, et les clients ne peuvent ni acheter ni payer dessus. Pour un site Web complet sur mesure, il faut aussi un outil de site Web.
- **Les points de fidélité sont « au mieux ».** Si le courant ou Internet coupe à la fraction de seconde exacte entre l’enregistrement d’une vente et l’ajout des points, la vente est en sécurité mais les points pourraient ne pas être ajoutés.
- **Pépin de carte-cadeau toute neuve (rare).** Si une carte-cadeau est vendue et qu’Internet coupe à ce moment exact, la vente enregistrée peut finir par pointer vers une carte annulée pendant le nettoyage. Si un client dit qu’une carte toute neuve ne fonctionne pas, regardez d’abord dans l’Historique — un gérant peut annuler cette vente.
- **Votre connexion vit dans le navigateur.** Quiconque peut ouvrir votre navigateur déverrouillé sur votre appareil est, en pratique, connecté sous votre nom. Déconnectez-vous sur les appareils partagés. Il n’y a pas de liste « quels appareils sont connectés » : se déconnecter fonctionne sur cet appareil, et si le compte maître réinitialise votre mot de passe, vous êtes déconnecté partout d’un coup.
- **Les copies de sécurité vivent sur le même appareil.** Si l’appareil est perdu ou effacé, elles disparaissent. Votre fichier de sauvegarde téléchargé (tâche 8) est la copie qui vit ailleurs — gardez-le.
- **Les taxes commencent à zéro.** Tant que vous ne les avez pas réglées (voir « Taxes » plus haut), aucune taxe n’est perçue. Demandez à votre comptable avant de vendre pour vrai.

Appendix — Installing on your own backend (technical) / Annexe — Installation sur votre propre serveur (technique)

This appendix is for the person installing the shop the very first time. It is the only technical part of this guide. If someone installed the shop for you, you can skip it.

Cette annexe est pour la personne qui installe la boutique la toute première fois. C'est la seule partie technique de ce guide. Si quelqu'un a installé la boutique pour vous, vous pouvez la sauter.

Step 1. Create a free project at supabase.com (Dashboard — New project). This is the shop's "cloud": where everything is saved.

Step 2. Open the SQL editor and run every file in supabase/migrations/ in order, from 001 to the latest. One of them (056) creates the built-in master account (admin / admin123, see Task 1); another (057) adds the factory reset; 063 adds the public storefront page tables.

Step 3. Copy the project URL and the anon key (Project Settings — API) into a .env file as VITE_SUPABASE_URL and VITE_SUPABASE_ANON_KEY (see .env.example).

Step 4. Run: npm install, then npm run build. Put the dist/ folder on any static host.

Step 5. Open the shop and do Task 1 immediately — change the master password before anything else.

Étape 1. Créez un projet gratuit sur supabase.com (Dashboard — New project). C'est le « nuage » de la boutique : là où tout est enregistré.

Étape 2. Ouvrez l'éditeur SQL et exécutez chaque fichier de supabase/migrations/ dans l'ordre, de 001 au plus récent. L'un d'eux (056) crée le compte maître intégré (admin / admin123, voir la tâche 1); un autre (057) ajoute la réinitialisation d'usine; 063 ajoute les tables de la page publique.

Étape 3. Copiez l'URL du projet et la clé anon (Project Settings — API) dans un fichier .env : VITE_SUPABASE_URL et VITE_SUPABASE_ANON_KEY (voir .env.example).

Étape 4. Exécutez : npm install, puis npm run build. Placez le dossier dist/ sur n'importe quel hébergeur statique.

Étape 5. Ouvrez la boutique et faites la tâche 1 immédiatement — changez le mot de passe maître avant tout le reste.

- Rebranding note: the master account's email must match BRAND.accountsDomain in src/lib/brand.js. If you change the domain, update the email in migration 056 before running it (plain usernames are turned into <username>@<domain> at sign-in).
- Note de personnalisation : le courriel du compte maître doit correspondre à BRAND.accountsDomain dans src/lib/brand.js. Si vous changez de domaine, mettez à jour le courriel dans la migration 056 avant de l'exécuter (les noms d'utilisateur simples sont transformés en <nom>@<domain> à la connexion).

TODO[ES] Spanish version — translation draft (fill in)

TODO[ES] This part of the guide is a scaffold for the Spanish translation. Every line below starts with TODO[ES] followed by the English source text. A human translator replaces each TODO[ES] line with the final Spanish text, keeping the same order, the same numbered steps, the same "You should now see" checkpoints and the same trouble lines. Do not delete lines and do not merge steps.

TODO[ES] The screenshots are added when the final app is ready, from the final shipped screens, in Spanish.

TODO[ES] Cover — Getting started

TODO[ES] Venda

TODO[ES] Getting started

TODO[ES] Point of sale, catalogue, team and files — in one calm app.

TODO[ES] A step-by-step guide for complete beginners. No experience needed.

TODO[ES] Guide — October 2026

TODO[ES] Start here — read this first

TODO[ES] Welcome! This guide shows you how to use **Vendra**, one small step at a time. You do not need to know anything about computers. Just follow the steps in order, and look at the pictures.

TODO[ES] What you need

- TODO[ES] A phone, a tablet, or a computer. Any of them works.
- TODO[ES] An internet connection. The shop lives on the internet, so your device must be connected.
- TODO[ES] The shop's web address (the link you were given when the shop was set up). Keep it somewhere safe — you will type it or tap it every time you open the shop.

TODO[ES] Words we use in this guide

TODO[ES] Every new word is explained here, in plain language. If a word further down is new to you, come back to this list.

TODO[ES] **Internet** — the worldwide network that connects devices; it is how your shop talks to its saved information.

TODO[ES] **Wi-Fi** — the wireless way your device connects to the internet at home or at work — it is the signal with the fan-shaped icon.

TODO[ES] **Browser** — the app you use to visit pages on the internet (it is called Chrome, Safari, Edge or Firefox on most devices).

TODO[ES] **Web address (a "link")** — the shop's address on the internet, like an address for a house. Typing it or tapping it takes you to the shop.

TODO[ES] **Tap / click** — "tap" means touch once with a finger on a screen; "click" means press once with a mouse. They do the same thing.

TODO[ES] **Sign in** — telling the shop who you are, so it shows your shop and keeps other people out.

TODO[ES] **Password** — a secret word only you know. You type it when you sign in, like a key for a lock.

TODO[ES] **Settings** — the place where you change how the shop behaves — like the dials on a machine.

TODO[ES] **Download** — saving a copy of a file from the internet onto your device, so you keep it.

TODO[ES] **Backup** — a safety copy of everything in your shop. If something goes wrong, the backup can put it back.

TODO[ES] **The cloud** — a short way of saying “saved safely on the internet” instead of only on your device.

TODO[ES] Opening your shop for the first time

Paso 1. TODO[ES] Find the browser icon on your device and tap it. (Look for Chrome, Safari, Edge or Firefox.)

Paso 2. TODO[ES] Tap the address bar — the long box at the top of the browser where addresses go.

■ Screenshot — TODO[ES] The address bar at the top of the browser

Capture d'écran — TODO[ES] The address bar at the top of the browser

(task-start-address.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Paso 3. TODO[ES] Type the shop's web address exactly as it was given to you, then press Enter (or tap Go).

Ahora debería ver: TODO[ES] a page that says it is checking the connection, then the sign-in screen.

TODO[ES] [If something goes wrong] If the page says it cannot reach the shop: check that Wi-Fi is on (look for the fan-shaped icon), then tap Retry. If it still fails, wait a minute and try again — the internet itself may be down.

TODO[ES] Keeping the shop one tap away

TODO[ES] So you do not have to type the address every time, save it once:

Paso 1. TODO[ES] Open the shop in your browser (see above).

Paso 2. TODO[ES] On a computer: press Ctrl+D (Windows) or Cmd+D (Mac) to bookmark it. On a phone or tablet: open the browser menu (three dots or a share icon) and tap “Add to Home screen” (or “Add bookmark”).

Paso 3. TODO[ES] From now on, tap that bookmark or the new home-screen icon to open the shop.

■ Screenshot — TODO[ES] The browser menu with “Add to Home screen”
Capture d’écran — TODO[ES] The browser menu with “Add to Home screen”

(task-start-bookmark.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

TODO[ES] Your first day, step by step

TODO[ES] Do these tasks in order the first time. Later, jump straight to the one you need.

TODO[ES] Task 1 — Sign in for the first time

TODO[ES] When the shop is new, it has one built-in account: the master account. Its username is **admin** and its first password is **admin123**. You will only use that password once — the shop makes you choose your own right away.

Paso 1. TODO[ES] Open the shop (see “Start here”).

Paso 2. TODO[ES] In the username box, type **admin**.

Paso 3. TODO[ES] In the password box, type **admin123**.

Paso 4. TODO[ES] Tap **Sign in**.

■ Screenshot — TODO[ES] The sign-in screen with admin typed in
Capture d’écran — TODO[ES] The sign-in screen with admin typed in

(task1-signin.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Ahora debería ver: TODO[ES] a box asking you to choose a new password. The shop will not open until you do — this is on purpose, so nobody can keep using the first password.

Paso 5. TODO[ES] Type a new password of your own. Make it at least 8 characters, and not something easy to guess (not your name, not 123456).

Paso 6. TODO[ES] Type the same new password again in the second box.

Paso 7. TODO[ES] Tap the confirm button.

■ Screenshot — TODO[ES] The “choose a new password” box
Capture d’écran — TODO[ES] The “choose a new password” box

(task1-newpassword.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Ahora debería ver: TODO[ES] the shop’s main screen (the desktop), with icons for the different parts of the shop.

TODO[ES] [If something goes wrong] **“This is a problem with how the system was set up — not your password.”** Your password was never even checked. The shop’s own connection settings are wrong. Retyping your password will not help — tell the person who installed the shop.

TODO[ES] [If something goes wrong] If your new password is refused: make it longer, and avoid common or repeating words.

TODO[ES] Task 2 — Tell the shop what kind of business you run

TODO[ES] Every shop is a little different. A restaurant needs tables and tips; a repair shop needs appointments. Instead of changing screens one by one, you pick one **business type** and the shop sets itself up for you. You can change it later — nothing is lost.

Paso 1. TODO[ES] Sign in with the master account (the one from Task 1 — username **admin**, with the password you chose in Task 1).

Paso 2. TODO[ES] Open **Settings**.

Paso 3. TODO[ES] Find **Business type** and tap it.

■ Screenshot — TODO[ES] Settings with “Business type”

Capture d’écran — TODO[ES] Settings with “Business type”

(task2-businesstype.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] a short list of business types: General, Retail, Restaurant / Food, Services / Appointments, Convenience / Fuel.

Paso 4. TODO[ES] Tap the one that matches your shop. Not sure? Pick **General** — you can change it later.

Paso 5. TODO[ES] If the shop asks “Apply?”, tap **Apply**.

■ Screenshot — TODO[ES] The business type list

Capture d’écran — TODO[ES] The business type list

(task2-presetlist.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] the shop set up for your kind of business (for example, a restaurant sees tables; a repair shop sees appointments up front).

TODO[ES] [If something goes wrong] If you do not see “Business type”: you may not be signed in with the master account. Sign out, then sign in as **admin** with the password you chose in Task 1.

TODO[ES] [If something goes wrong] Picked the wrong type? Do Task 2 again and pick another. Products, sales and customers are never deleted by changing types.

TODO[ES] Task 3 — Add a product you sell

TODO[ES] The shop can only sell what it knows. Add each product once; after that, selling it takes two taps.

Paso 1. TODO[ES] From the main screen, open **Point of Sale**.

Paso 2. TODO[ES] Tap **Add product**.

■ Screenshot — TODO[ES] The “Add product” button in Point of Sale

Capture d'écran — TODO[ES] The “Add product” button in Point of Sale

(task3-addproduct.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] a form with empty boxes for the product's name and price.

Paso 3. TODO[ES] Type the product's name (for example: Coffee).

Paso 4. TODO[ES] Type its price (for example: 2.50). Use a dot, not a comma, for cents.

Paso 5. TODO[ES] If you keep stock (how many you have), type the number you have now. If not, leave it empty.

Paso 6. TODO[ES] Tap **Save**.

■ Screenshot — TODO[ES] The product form, filled in

Capture d'écran — TODO[ES] The product form, filled in

(task3-productform.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] your product, with its price, in the grid of products.

TODO[ES] [If something goes wrong] If the product does not appear: check that you tapped Save, and that you are looking at the Point of Sale (not the Catalogue — they are two different lists).

TODO[ES] [If something goes wrong] Price looks wrong (250 instead of 2.50)? You typed the price in cents. Edit the product and type 2.50.

TODO[ES] Task 4 — Make a cash sale

TODO[ES] “Cash sale” means the customer pays you with money (not a card). The shop records the sale either way.

Paso 1. TODO[ES] Open **Point of Sale**.

Paso 2. TODO[ES] Tap the product the customer is buying (for example: Coffee).

Ahora debería ver: TODO[ES] the product appears in the list on the side (the “cart” — what the customer is buying), and the total goes up.

Paso 3. TODO[ES] Buying more than one? Tap the product again, or tap the + next to it in the cart.

Paso 4. TODO[ES] When everything is in the cart, tap the big **Pay / Charge** button.

■ Screenshot — TODO[ES] Point of Sale with one product in the cart

Capture d'écran — TODO[ES] Point of Sale with one product in the cart

(task4-posgrid.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] the payment screen, asking how the customer pays.

Paso 5. TODO[ES] Tap **Cash**.

Paso 6. TODO[ES] Type how much money the customer hands you (or tap the exact amount).

Paso 7. TODO[ES] Tap **Complete sale**.

■ Screenshot — TODO[ES] The payment screen with Cash chosen

Capture d'écran — TODO[ES] The payment screen with Cash chosen

(task4-pay.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] a receipt, and the change to give back (if any). The sale is saved right away.

Paso 8. TODO[ES] Hand the customer their change, and the receipt if they want it. Done!

TODO[ES] [If something goes wrong] Tapped the wrong product? In the cart, tap the – (minus) to remove one, or the trash icon to remove it completely, before you pay.

TODO[ES] [If something goes wrong] If the sale stops with a “could not reach the shop” message: the internet dropped. Your cart is still there — see Task 10. No money was taken.

TODO[ES] Task 5 — Give a refund

TODO[ES] A refund gives the customer their money back for something they bought. You find the sale first, then refund it.

Paso 1. TODO[ES] Open **Point of Sale**.

Paso 2. TODO[ES] Tap **History**.

■ Screenshot — TODO[ES] The History list of past sales

Capture d'écran — TODO[ES] The History list of past sales

(task5-history.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] the list of past sales, newest first.

Paso 3. TODO[ES] Tap the sale you want to refund.

Ahora debería ver: TODO[ES] the details of that sale.

Paso 4. TODO[ES] Tap **Refund**.

Paso 5. TODO[ES] Check the amount. If only part is being returned, change the quantity to what came back.

Paso 6. TODO[ES] You may type a reason (why it came back). You can also leave it empty.

Paso 7. TODO[ES] Tap **Confirm refund**.

■ Screenshot — TODO[ES] The refund box for a sale
Capture d'écran — TODO[ES] The refund box for a sale

(task5-refund.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] the sale in History now shows it was refunded. Refunded sales cannot be voided (deleted) afterwards — this is on purpose, so the record stays honest.

TODO[ES] [If something goes wrong] Can't find the sale? Check you are signed in to the right shop, and scroll — History is newest first.

TODO[ES] [If something goes wrong] Refund button missing? Only owners and managers can refund. Ask the person with the master account.

TODO[ES] Task 6 — Put your shop on the web (the public page)

TODO[ES] Your shop can have a simple page on the web that anyone can look at: your shop name, what you sell, your hours and how to reach you. Products you add in the Point of Sale appear on the page by themselves — you do not type them twice. This page is a shop window, not a full website: visitors cannot buy online there.

Paso 1. TODO[ES] Sign in with the master account, or as the shop's owner/manager.

Paso 2. TODO[ES] Open the **Admin** panel.

Paso 3. TODO[ES] Tap the **Storefront** tab.

■ Screenshot — TODO[ES] The Admin panel, Storefront tab
Capture d'écran — TODO[ES] The Admin panel, Storefront tab

(task6-storefronttab.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] boxes for your public shop name, a short line about your shop ("About"), opening hours, email, phone, and a colour.

Paso 4. TODO[ES] Fill in the boxes. Write them for strangers: what you sell, where you are, when you are open.

Paso 5. TODO[ES] In the web address box, choose your shop's address: small letters, numbers and dashes only (for example my - shop). Your full public link ends with #/store/my - shop.

Paso 6. TODO[ES] Turn on **Page is published**.

Paso 7. TODO[ES] Tap **Save**.

■ Screenshot — TODO[ES] "Page is published" turned on, with the Save button
Capture d'écran — TODO[ES] "Page is published" turned on, with the Save button

(task6-publish.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] your public link, ready to copy.

Paso 8. TODO[ES] Tap the link (or copy it) to look at your page the way customers see it.

■ **Screenshot — TODO[ES] The public page customers see**
Capture d'écran — TODO[ES] The public page customers see

(task6-publicpage.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] your shop page, with your products. (To keep one product off the page: in its product settings, set it to Hidden. To hide all prices: turn off “Show prices” in the Storefront tab.)

TODO[ES] [If something goes wrong] The link says “not available yet”: “Page is published” is off, or you did not tap Save after turning it on. Go back to the Storefront tab and check both.

TODO[ES] [If something goes wrong] A product is missing from the page: it is set to Hidden in its product settings, or it is only in the Catalogue (the public page shows Point of Sale products).

TODO[ES] Task 7 — Make the till easy to touch (tablets and phones)

TODO[ES] If your till is a tablet or a phone, small buttons are hard to tap. This setting makes buttons bigger and the home screen simpler, like a phone's. Turn it on for each device that needs it — it only changes that device.

Paso 1. TODO[ES] Open **Settings**.

Paso 2. TODO[ES] Tap **Appearance**.

Paso 3. TODO[ES] Turn on **Touch screen optimization**.

■ **Screenshot — TODO[ES] “Touch screen optimization” in Settings · Appearance**
Capture d'écran — TODO[ES] “Touch screen optimization” in Settings · Appearance

(task7-touchtoggle.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] the home screen changes: big icons, apps open full-screen, and buttons everywhere are bigger.

Paso 4. TODO[ES] Try it: open the Point of Sale and tap a product. Buttons should be easy to hit with a finger.

Paso 5. TODO[ES] Want it back the old way? Repeat steps 1–3 and turn it off.

■ **Screenshot — TODO[ES] The touch home screen, with big icons**
Capture d'écran — TODO[ES] The touch home screen, with big icons

(task7-touchhome.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

TODO[ES] [If something goes wrong] Nothing changed? The setting applies to this device only, and the home screen changes first. If the till still shows the desktop-style home screen, close and reopen the shop (see “Start here”).

TODO[ES] Task 8 — Save a backup (do this regularly)

TODO[ES] A backup is one file that holds everything in your account: products, sales, customers, settings. Save one regularly — for example every Friday — and keep the file somewhere safe, like a USB key or your email. If anything ever goes badly wrong, this file is how you get your shop back.

Paso 1. TODO[ES] Open **Settings**.

Paso 2. TODO[ES] Tap **Data**.

Paso 3. TODO[ES] Tap **Download backup** (account backup).

■ Screenshot — TODO[ES] The backup button in Settings · Data
Capture d'écran — TODO[ES] The backup button in Settings · Data

(task8-backup.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] a file named like `drift-backup-2026-10-01.json` downloading to your device.

Paso 4. TODO[ES] Find the downloaded file (usually in your Downloads folder) and copy it somewhere safe. That is it — done.

TODO[ES] [If something goes wrong] No file appeared? Some browsers block downloads. Look for a small blocked-download icon near the address bar, allow the download, and try again.

TODO[ES] [If something goes wrong] The backup file contains private things (like staff PIN numbers). Keep it like you would keep keys: do not share it publicly.

TODO[ES] Task 9 — Start completely over (factory reset)

TODO[ES] **Warning first.** A factory reset **deletes everything and everyone**: all accounts, products, sales, customers, appointments, files — gone, as if the shop was brand new. **There is no undo.** Only do this if you truly want to start over, or hand the shop to someone else completely empty. Only the master account (username **admin**, with the password you chose in Task 1) can do it.

Paso 1. TODO[ES] First, do Task 8 (download a backup) and keep the file safe. After a reset, that file is the only way back.

Paso 2. TODO[ES] Sign in as **admin** (master account).

Paso 3. TODO[ES] Open the **Admin** panel.

Paso 4. TODO[ES] Scroll to the **Danger zone** at the bottom.

Paso 5. TODO[ES] Tap **Factory reset**.

■ Screenshot — TODO[ES] The Danger zone with the Factory reset button
Capture d'écran — TODO[ES] The Danger zone with the Factory reset button

(task9-dangerzone.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] a warning box. Before anything is deleted, the shop saves one last backup by itself and downloads it. If that backup fails, the reset stops and nothing is deleted.

Paso 6. TODO[ES] Read the warning. Then type the word **RESET** (in capital letters) in the box.

Ahora debería ver: TODO[ES] the reset button lights up. It stays off until the word is typed exactly right — this is on purpose, so nobody can tap it by accident.

Paso 7. TODO[ES] Tap the reset button, and confirm.

■ Screenshot — TODO[ES] Typing RESET to arm the reset button
Capture d'écran — TODO[ES] Typing RESET to arm the reset button

(task9-typereset.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] you are signed out. The shop is empty and new. Sign in again with **admin / admin123** and pick a new password (same as Task 1).

TODO[ES] [If something goes wrong] The reset button stays off: the word must be exactly RESET, all capitals, no spaces. Check Caps Lock.

TODO[ES] [If something goes wrong] “PRE-RESET BACKUP FAILED”: the safety backup could not be saved, so the reset did not happen and nothing was deleted. Do Task 8 by hand, then try again.

TODO[ES] Task 10 — When a sale fails because the internet dropped

TODO[ES] Your shop lives on the internet. Every sale is recorded on the internet the moment it happens. If the internet drops in the middle of a sale, the sale cannot finish. Here is exactly what happens, and what to do. Good news first: **nobody is charged**, and **your cart (what the customer is buying) stays on the screen**. Nothing is lost.

Paso 1. TODO[ES] Read the message on the screen. It will say the shop could not be reached, and the sale did not go through.

■ Screenshot — TODO[ES] The “could not reach the shop” message at checkout
Capture d'écran — TODO[ES] The “could not reach the shop” message at checkout

(task10-saleerror.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Ahora debería ver: TODO[ES] your cart is still there, with every item, exactly as it was.

Paso 2. TODO[ES] Check the Wi-Fi: look for the fan-shaped icon on the device. If it is missing or has an “!”, the device lost the internet.

Paso 3. TODO[ES] Wait for the internet to come back (the icon returns). This can take a minute after an outage.

Paso 4. TODO[ES] Tap **Retry** (or complete the sale again, the same way as Task 4).

Ahora debería ver: TODO[ES] the receipt, like a normal sale. The sale is recorded once — retrying does not charge twice.

TODO[ES] [If something goes wrong] If the customer cannot wait: there is no “offline” selling — a sale that never reached the internet simply never happened. Write down what they bought on paper if you like, and ring it in when the internet returns.

TODO[ES] [If something goes wrong] If sales keep failing for a long time, the problem is the internet connection or the shop’s server — not the till. Tell the person who installed the shop.

TODO[ES] More parts of the shop (in plain words)

TODO[ES] The Catalogue

TODO[ES] The **Catalogue** is your stock list: what you have, how many, and where it sits on the shelf. It is a different list from the Point of Sale products (Task 3). Something in the Catalogue marked “in store” can be scanned straight into a sale. You can also add many items at once from a spreadsheet file (this is called a CSV file), and look items up by their barcode/ISBN number. Donations, fair days and special orders (a customer asking you to order something in) each have their own simple flow.

TODO[ES] Appointments

TODO[ES] **Appointments** is a booking book: customers book a time, and two bookings cannot take the same time by accident.

TODO[ES] Classifieds — your shop’s buy-and-sell board

TODO[ES] **Classifieds** is your shop’s own classified-ads board, like a small Kijiji built into your store. Create ads with photos, a price and a description; mark them For sale, Free, Services, Wanted, Jobs, Events or Announcements. Published ads appear on your public storefront, where buyers can save them as favourites.

TODO[ES] My listings — free ads for everyone

TODO[ES] Anyone can post **free** local ads — no shop needed. Open **My listings** and post with photos and a price. Free accounts can keep up to 15 ads active and post up to 5 new ads a day; ads stay up for 60 days and can be renewed.

TODO[ES] Locked out? Get back in without email

TODO[ES] You never need email to recover your account. At sign-up you receive **recovery codes** — one-time codes to keep somewhere safe. On the sign-in screen, choose “Forgot password?” then “Use a recovery code” to set a new password. You can also set **security questions** in Settings — Account.

TODO[ES] Files

TODO[ES] **Files** keeps your documents and pictures in the shop, and you can search the words inside them.

TODO[ES] Certificates — the staff time clock

TODO[ES] Staff clock in and out with their own secret number (a PIN — a short number, like a bank card's). Managers can fix a punch, make the schedule (two shifts for the same person cannot overlap), and print attestations — signed papers that prove someone's hours. Volunteer/community hours are kept separate from paid hours. Team members are invited with a code and have a role: Owner (can do everything), Manager (almost everything), Cashier (sells).

TODO[ES] Taxes — read this before your first real sale

TODO[ES] **A new shop charges no tax at all** until you set it up. That is on purpose, so nobody is charged the wrong tax. Before selling for real, ask your accountant (the person who does your taxes) two things: what tax percentages apply where you are, and whether each tax is calculated on the price alone, or on price-plus-the-other-tax. Then, in the Point of Sale settings, type those numbers in, and press **Save**. The shop never changes tax numbers by itself. Some organizations pay no tax: they can be marked tax-exempt so their receipts show no tax.

TODO[ES] Other settings

- TODO[ES] Colours and light/dark: Settings · Appearance.
- TODO[ES] If someone else changes a setting on another till, your screen picks it up within about a minute. If you are in the middle of typing in a form, your typing is never erased by that.
- TODO[ES] When a newer version of the shop is ready, a small message invites you to refresh the page. Nothing is forced on you mid-sale.

TODO[ES] When something goes wrong

TODO[ES] This shop is built to fail politely: it explains, it never shows a blank page, and it never silently loses a sale. Here are the bad moments we know about, in plain words.

TODO[ES] The shop cannot be reached at opening

- TODO[ES] Before opening, the shop checks itself. If its own connection settings look wrong (for example a cut-off key), the screen says the setup looks wrong and that no password will work until whoever installed the shop fixes it. If the settings are fine but the server does not answer, the screen says that instead. Either way there is a **Retry** button — tap it once the internet is back.

TODO[ES] One part of the shop stops working

- TODO[ES] Each part of the shop is walled off from the others. If one part breaks, only that part shows a message, with a **Retry** button and a short code (like RS-9K2Q1-4F2A). Write the code down and tell whoever looks after the shop — it points straight at the problem. The rest of the shop keeps working. If the shop breaks three times in a row while opening, it starts in a safe mode with repair options instead of breaking again and again.

TODO[ES] Dangerous buttons protect you

- TODO[ES] Before anything destructive (deleting, voiding a gift card, removing a time punch), the shop quietly saves a small safety copy on the device — the last 3 are kept. That is a safety net, not a backup: still do Task 8 regularly.

TODO[ES] Getting help

- TODO[ES] Open **Help & Guide** from the Start menu (the Start menu is the main menu button of the shop) — this guide lives there too. From the sign-in screen, you can also send a support message.

TODO[ES] Honest limits — what this shop cannot do

TODO[ES] We would rather tell you the limits than let you discover them. Here they are, plainly.

- TODO[ES] **No internet, no selling.** There is no offline mode on purpose: a sale is only real once it is recorded on the internet. (Task 10 shows what happens.)
- TODO[ES] **The public page is a shop window, not a website.** Its look is fixed, and customers cannot buy or pay on it. For a full custom website, you need a website tool as well.
- TODO[ES] **Loyalty points are “best effort”.** If the power or internet dies at the exact split second between recording a sale and adding points, the sale is safe but the points might not be added.
- TODO[ES] **Brand-new gift card glitch (rare).** If a gift card is sold and the internet drops at that exact moment, the recorded sale can end up pointing at a card that was cancelled during cleanup. If a customer says a brand-new card does not work, look in History first — a manager can void that sale.
- TODO[ES] **Your sign-in lives in the browser.** Whoever can open your unlocked browser on your device is, in practice, signed in as you. Sign out on shared devices. There is no list of “which devices are signed in”: signing out works on that device, and if the master account resets your password, you are signed out everywhere at once.
- TODO[ES] **Safety copies live on the same device.** If the device is lost or wiped, they are gone. Your downloaded backup file (Task 8) is the copy that lives elsewhere — keep it.
- TODO[ES] **Taxes start at zero.** Until you set them (see “Taxes” above), no tax is charged at all. Ask your accountant before real selling.

TODO[ES] Appendix — Installing on your own backend (technical)

TODO[ES] This appendix is for the person installing the shop the very first time. It is the only technical part of this guide. If someone installed the shop for you, you can skip it.

Paso 1. TODO[ES] Create a free project at supabase.com (Dashboard — New project). This is the shop’s “cloud”: where everything is saved.

Paso 2. TODO[ES] Open the SQL editor and run every file in supabase/migrations/ in order, from 001 to the latest. One of them (056) creates the built-in master account (admin / admin123, see Task 1); another (057) adds the factory reset; 063 adds the public storefront page tables.

Paso 3. TODO[ES] Copy the project URL and the anon key (Project Settings — API) into a .env file as VITE_SUPABASE_URL and VITE_SUPABASE_ANON_KEY (see .env.example).

Paso 4. TODO[ES] Run: npm install, then npm run build. Put the dist/ folder on any static host.

Paso 5. TODO[ES] Open the shop and do Task 1 immediately — change the master password before anything else.

- TODO[ES] Rebranding note: the master account's email must match BRAND.accountsDomain in src/lib/brand.js. If you change the domain, update the email in migration 056 before running it (plain usernames are turned into <username>@<domain> at sign-in).

TODO[ES] Closing line

TODO[ES] Venda — step-by-step guide. The words on the screen always win over this guide.

TODO[PT] Brazilian Portuguese version — translation draft (fill in)

TODO[PT] This part of the guide is a scaffold for the Brazilian Portuguese translation. Every line below starts with TODO[PT] followed by the English source text. A human translator replaces each TODO[PT] line with the final Brazilian Portuguese text, keeping the same order, the same numbered steps, the same "You should now see" checkpoints and the same trouble lines. Do not delete lines and do not merge steps.

TODO[PT] The screenshots are added when the final app is ready, from the final shipped screens, in Brazilian Portuguese.

TODO[PT] Cover — Getting started

TODO[PT] Venda

TODO[PT] Getting started

TODO[PT] Point of sale, catalogue, team and files — in one calm app.

TODO[PT] A step-by-step guide for complete beginners. No experience needed.

TODO[PT] Guide — October 2026

TODO[PT] Start here — read this first

TODO[PT] Welcome! This guide shows you how to use **Vendra**, one small step at a time. You do not need to know anything about computers. Just follow the steps in order, and look at the pictures.

TODO[PT] What you need

- TODO[PT] A phone, a tablet, or a computer. Any of them works.
- TODO[PT] An internet connection. The shop lives on the internet, so your device must be connected.
- TODO[PT] The shop's web address (the link you were given when the shop was set up). Keep it somewhere safe — you will type it or tap it every time you open the shop.

TODO[PT] Words we use in this guide

TODO[PT] Every new word is explained here, in plain language. If a word further down is new to you, come back to this list.

TODO[PT] **Internet** — the worldwide network that connects devices; it is how your shop talks to its saved information.

TODO[PT] **Wi-Fi** — the wireless way your device connects to the internet at home or at work — it is the signal with the fan-shaped icon.

TODO[PT] **Browser** — the app you use to visit pages on the internet (it is called Chrome, Safari, Edge or Firefox on most devices).

TODO[PT] **Web address (a “link”)** — the shop's address on the internet, like an address for a house. Typing it or tapping it takes you to the shop.

TODO[PT] **Tap / click** — “tap” means touch once with a finger on a screen; “click” means press once with a mouse. They do the same thing.

TODO[PT] **Sign in** — telling the shop who you are, so it shows your shop and keeps other people out.

TODO[PT] **Password** — a secret word only you know. You type it when you sign in, like a key for a lock.

TODO[PT] **Settings** — the place where you change how the shop behaves — like the dials on a machine.

TODO[PT] **Download** — saving a copy of a file from the internet onto your device, so you keep it.

TODO[PT] **Backup** — a safety copy of everything in your shop. If something goes wrong, the backup can put it back.

TODO[PT] **The cloud** — a short way of saying “saved safely on the internet” instead of only on your device.

TODO[PT] Opening your shop for the first time

Passo 1. TODO[PT] Find the browser icon on your device and tap it. (Look for Chrome, Safari, Edge or Firefox.)

Passo 2. TODO[PT] Tap the address bar — the long box at the top of the browser where addresses go.

■ Screenshot — TODO[PT] The address bar at the top of the browser

Capture d'écran — TODO[PT] The address bar at the top of the browser

(task-start-address.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Passo 3. TODO[PT] Type the shop's web address exactly as it was given to you, then press Enter (or tap Go).

Agora você deve ver: TODO[PT] a page that says it is checking the connection, then the sign-in screen.

TODO[PT] [If something goes wrong] If the page says it cannot reach the shop: check that Wi-Fi is on (look for the fan-shaped icon), then tap Retry. If it still fails, wait a minute and try again — the internet itself may be down.

TODO[PT] Keeping the shop one tap away

TODO[PT] So you do not have to type the address every time, save it once:

Passo 1. TODO[PT] Open the shop in your browser (see above).

Passo 2. TODO[PT] On a computer: press Ctrl+D (Windows) or Cmd+D (Mac) to bookmark it. On a phone or tablet: open the browser menu (three dots or a share icon) and tap “Add to Home screen” (or “Add bookmark”).

Passo 3. TODO[PT] From now on, tap that bookmark or the new home-screen icon to open the shop.

■ Screenshot — TODO[PT] The browser menu with “Add to Home screen”

Capture d'écran — TODO[PT] The browser menu with “Add to Home screen”

(task-start-bookmark.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

TODO[PT] Your first day, step by step

TODO[PT] Do these tasks in order the first time. Later, jump straight to the one you need.

TODO[PT] Task 1 — Sign in for the first time

TODO[PT] When the shop is new, it has one built-in account: the master account. Its username is **admin** and its first password is **admin123**. You will only use that password once — the shop makes you choose your own right away.

Passo 1. TODO[PT] Open the shop (see “Start here”).

Passo 2. TODO[PT] In the username box, type **admin**.

Passo 3. TODO[PT] In the password box, type **admin123**.

Passo 4. TODO[PT] Tap **Sign in**.

■ Screenshot — TODO[PT] The sign-in screen with admin typed in
Capture d'écran — TODO[PT] The sign-in screen with admin typed in

(task1-signin.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] a box asking you to choose a new password. The shop will not open until you do — this is on purpose, so nobody can keep using the first password.

Passo 5. TODO[PT] Type a new password of your own. Make it at least 8 characters, and not something easy to guess (not your name, not 123456).

Passo 6. TODO[PT] Type the same new password again in the second box.

Passo 7. TODO[PT] Tap the confirm button.

■ Screenshot — TODO[PT] The “choose a new password” box
Capture d'écran — TODO[PT] The “choose a new password” box

(task1-newpassword.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] the shop's main screen (the desktop), with icons for the different parts of the shop.

TODO[PT] [If something goes wrong] “**This is a problem with how the system was set up — not your password.**” Your password was never even checked. The shop's own connection settings are wrong. Retyping your password will not help — tell the person who installed the shop.

TODO[PT] [If something goes wrong] If your new password is refused: make it longer, and avoid common or repeating words.

TODO[PT] Task 2 — Tell the shop what kind of business you run

TODO[PT] Every shop is a little different. A restaurant needs tables and tips; a repair shop needs appointments. Instead of changing screens one by one, you pick one **business type** and the shop sets itself up for you. You can change it later — nothing is lost.

Passo 1. TODO[PT] Sign in with the master account (the one from Task 1 — username **admin**, with the password you chose in Task 1).

Passo 2. TODO[PT] Open **Settings**.

Passo 3. TODO[PT] Find **Business type** and tap it.

■ Screenshot — TODO[PT] Settings with “Business type”
Capture d'écran — TODO[PT] Settings with “Business type”

(task2-businessype.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] a short list of business types: General, Retail, Restaurant / Food, Services / Appointments, Convenience / Fuel.

Passo 4. TODO[PT] Tap the one that matches your shop. Not sure? Pick **General** — you can change it later.

Passo 5. TODO[PT] If the shop asks “Apply?”, tap **Apply**.

■ Screenshot — TODO[PT] The business type list
Capture d’écran — TODO[PT] The business type list

(task2-presetlist.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Agora você deve ver: TODO[PT] the shop set up for your kind of business (for example, a restaurant sees tables; a repair shop sees appointments up front).

TODO[PT] [If something goes wrong] If you do not see “Business type”: you may not be signed in with the master account. Sign out, then sign in as **admin** with the password you chose in Task 1.

TODO[PT] [If something goes wrong] Picked the wrong type? Do Task 2 again and pick another. Products, sales and customers are never deleted by changing types.

TODO[PT] Task 3 — Add a product you sell

TODO[PT] The shop can only sell what it knows. Add each product once; after that, selling it takes two taps.

Passo 1. TODO[PT] From the main screen, open **Point of Sale**.

Passo 2. TODO[PT] Tap **Add product**.

■ Screenshot — TODO[PT] The “Add product” button in Point of Sale
Capture d’écran — TODO[PT] The “Add product” button in Point of Sale

(task3-addproduct.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Agora você deve ver: TODO[PT] a form with empty boxes for the product’s name and price.

Passo 3. TODO[PT] Type the product’s name (for example: Coffee).

Passo 4. TODO[PT] Type its price (for example: 2.50). Use a dot, not a comma, for cents.

Passo 5. TODO[PT] If you keep stock (how many you have), type the number you have now. If not, leave it empty.

Passo 6. TODO[PT] Tap **Save**.

■ Screenshot — TODO[PT] The product form, filled in
Capture d’écran — TODO[PT] The product form, filled in

(task3-productform.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Agora você deve ver: TODO[PT] your product, with its price, in the grid of products.

TODO[PT] [If something goes wrong] If the product does not appear: check that you tapped Save, and that you are looking at the Point of Sale (not the Catalogue — they are two different lists).

TODO[PT] [If something goes wrong] Price looks wrong (250 instead of 2.50)? You typed the price in cents. Edit the product and type 2.50.

TODO[PT] Task 4 — Make a cash sale

TODO[PT] “Cash sale” means the customer pays you with money (not a card). The shop records the sale either way.

Passo 1. TODO[PT] Open **Point of Sale**.

Passo 2. TODO[PT] Tap the product the customer is buying (for example: Coffee).

Agora você deve ver: TODO[PT] the product appears in the list on the side (the “cart” — what the customer is buying), and the total goes up.

Passo 3. TODO[PT] Buying more than one? Tap the product again, or tap the + next to it in the cart.

Passo 4. TODO[PT] When everything is in the cart, tap the big **Pay / Charge** button.

■ Screenshot — TODO[PT] Point of Sale with one product in the cart
Capture d'écran — TODO[PT] Point of Sale with one product in the cart

(task4-posgrid.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] the payment screen, asking how the customer pays.

Passo 5. TODO[PT] Tap **Cash**.

Passo 6. TODO[PT] Type how much money the customer hands you (or tap the exact amount).

Passo 7. TODO[PT] Tap **Complete sale**.

■ Screenshot — TODO[PT] The payment screen with Cash chosen
Capture d'écran — TODO[PT] The payment screen with Cash chosen

(task4-pay.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] a receipt, and the change to give back (if any). The sale is saved right away.

Passo 8. TODO[PT] Hand the customer their change, and the receipt if they want it. Done!

TODO[PT] [If something goes wrong] Tapped the wrong product? In the cart, tap the – (minus) to remove one, or the trash icon to remove it completely, before you pay.

TODO[PT] [If something goes wrong] If the sale stops with a “could not reach the shop” message: the internet dropped. Your cart is still there — see Task 10. No money was taken.

TODO[PT] Task 5 — Give a refund

TODO[PT] A refund gives the customer their money back for something they bought. You find the sale first, then refund it.

Passo 1. TODO[PT] Open **Point of Sale**.

Passo 2. TODO[PT] Tap **History**.

■ Screenshot — TODO[PT] The History list of past sales

Capture d'écran — TODO[PT] The History list of past sales

(task5-history.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] the list of past sales, newest first.

Passo 3. TODO[PT] Tap the sale you want to refund.

Agora você deve ver: TODO[PT] the details of that sale.

Passo 4. TODO[PT] Tap **Refund**.

Passo 5. TODO[PT] Check the amount. If only part is being returned, change the quantity to what came back.

Passo 6. TODO[PT] You may type a reason (why it came back). You can also leave it empty.

Passo 7. TODO[PT] Tap **Confirm refund**.

■ Screenshot — TODO[PT] The refund box for a sale

Capture d'écran — TODO[PT] The refund box for a sale

(task5-refund.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] the sale in History now shows it was refunded. Refunded sales cannot be voided (deleted) afterwards — this is on purpose, so the record stays honest.

TODO[PT] [If something goes wrong] Can't find the sale? Check you are signed in to the right shop, and scroll — History is newest first.

TODO[PT] [If something goes wrong] Refund button missing? Only owners and managers can refund. Ask the person with the master account.

TODO[PT] Task 6 — Put your shop on the web (the public page)

TODO[PT] Your shop can have a simple page on the web that anyone can look at: your shop name, what you sell, your hours and how to reach you. Products you add in the Point of Sale appear on the page by themselves — you do not type them twice. This page is a shop window, not a full website: visitors cannot buy online there.

Passo 1. TODO[PT] Sign in with the master account, or as the shop's owner/manager.

Passo 2. TODO[PT] Open the **Admin** panel.

Passo 3. TODO[PT] Tap the **Storefront** tab.

■ Screenshot — TODO[PT] The Admin panel, Storefront tab

Capture d'écran — TODO[PT] The Admin panel, Storefront tab

(task6-storefronttab.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] boxes for your public shop name, a short line about your shop (“About”), opening hours, email, phone, and a colour.

Passo 4. TODO[PT] Fill in the boxes. Write them for strangers: what you sell, where you are, when you are open.

Passo 5. TODO[PT] In the web address box, choose your shop's address: small letters, numbers and dashes only (for example my - shop). Your full public link ends with #/store/my - shop.

Passo 6. TODO[PT] Turn on **Page is published**.

Passo 7. TODO[PT] Tap **Save**.

■ Screenshot — TODO[PT] “Page is published” turned on, with the Save button

Capture d'écran — TODO[PT] “Page is published” turned on, with the Save button

(task6-publish.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] your public link, ready to copy.

Passo 8. TODO[PT] Tap the link (or copy it) to look at your page the way customers see it.

■ Screenshot — TODO[PT] The public page customers see

Capture d'écran — TODO[PT] The public page customers see

(task6-publicpage.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] your shop page, with your products. (To keep one product off the page: in its product settings, set it to Hidden. To hide all prices: turn off “Show prices” in the Storefront tab.)

TODO[PT] [If something goes wrong] The link says “not available yet”: “Page is published” is off, or you did not tap Save after turning it on. Go back to the Storefront tab and check both.

TODO[PT] [If something goes wrong] A product is missing from the page: it is set to Hidden in its product settings, or it is only in the Catalogue (the public page shows Point of Sale products).

TODO[PT] Task 7 — Make the till easy to touch (tablets and phones)

TODO[PT] If your till is a tablet or a phone, small buttons are hard to tap. This setting makes buttons bigger and the home screen simpler, like a phone's. Turn it on for each device that needs it — it only changes that device.

Passo 1. TODO[PT] Open **Settings**.

Passo 2. TODO[PT] Tap **Appearance**.

Passo 3. TODO[PT] Turn on **Touch screen optimization**.

■ **Screenshot — TODO[PT] “Touch screen optimization” in Settings · Appearance**
Capture d'écran — TODO[PT] “Touch screen optimization” in Settings · Appearance

(task7-touchtoggle.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] the home screen changes: big icons, apps open full-screen, and buttons everywhere are bigger.

Passo 4. TODO[PT] Try it: open the Point of Sale and tap a product. Buttons should be easy to hit with a finger.

Passo 5. TODO[PT] Want it back the old way? Repeat steps 1–3 and turn it off.

■ **Screenshot — TODO[PT] The touch home screen, with big icons**
Capture d'écran — TODO[PT] The touch home screen, with big icons

(task7-touchhome.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

TODO[PT] [If something goes wrong] Nothing changed? The setting applies to this device only, and the home screen changes first. If the till still shows the desktop-style home screen, close and reopen the shop (see “Start here”).

TODO[PT] Task 8 — Save a backup (do this regularly)

TODO[PT] A backup is one file that holds everything in your account: products, sales, customers, settings. Save one regularly — for example every Friday — and keep the file somewhere safe, like a USB key or your email. If anything ever goes badly wrong, this file is how you get your shop back.

Passo 1. TODO[PT] Open **Settings**.

Passo 2. TODO[PT] Tap **Data**.

Passo 3. TODO[PT] Tap **Download backup** (account backup).

■ **Screenshot — TODO[PT] The backup button in Settings · Data**
Capture d'écran — TODO[PT] The backup button in Settings · Data

(task8-backup.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] a file named like `drift-backup-2026-10-01.json` downloading to your device.

Passo 4. TODO[PT] Find the downloaded file (usually in your Downloads folder) and copy it somewhere safe. That is it — done.

TODO[PT] [If something goes wrong] No file appeared? Some browsers block downloads. Look for a small blocked-download icon near the address bar, allow the download, and try again.

TODO[PT] [If something goes wrong] The backup file contains private things (like staff PIN numbers). Keep it like you would keep keys: do not share it publicly.

TODO[PT] Task 9 — Start completely over (factory reset)

TODO[PT] **Warning first.** A factory reset **deletes everything and everyone**: all accounts, products, sales, customers, appointments, files — gone, as if the shop was brand new. **There is no undo.** Only do this if you truly want to start over, or hand the shop to someone else completely empty. Only the master account (username **admin**, with the password you chose in Task 1) can do it.

Passo 1. TODO[PT] First, do Task 8 (download a backup) and keep the file safe. After a reset, that file is the only way back.

Passo 2. TODO[PT] Sign in as **admin** (master account).

Passo 3. TODO[PT] Open the **Admin** panel.

Passo 4. TODO[PT] Scroll to the **Danger zone** at the bottom.

Passo 5. TODO[PT] Tap **Factory reset**.

■ Screenshot — TODO[PT] The Danger zone with the Factory reset button
Capture d'écran — TODO[PT] The Danger zone with the Factory reset button

(task9-dangerzone.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] a warning box. Before anything is deleted, the shop saves one last backup by itself and downloads it. If that backup fails, the reset stops and nothing is deleted.

Passo 6. TODO[PT] Read the warning. Then type the word **RESET** (in capital letters) in the box.

Agora você deve ver: TODO[PT] the reset button lights up. It stays off until the word is typed exactly right — this is on purpose, so nobody can tap it by accident.

Passo 7. TODO[PT] Tap the reset button, and confirm.

■ Screenshot — TODO[PT] Typing RESET to arm the reset button
Capture d'écran — TODO[PT] Typing RESET to arm the reset button

(task9-typereset.png — added when the final app is ready / ajoutée quand l'appli finale est prête)

Agora você deve ver: TODO[PT] you are signed out. The shop is empty and new. Sign in again with **admin** / **admin123** and pick a new password (same as Task 1).

TODO[PT] [If something goes wrong] The reset button stays off: the word must be exactly RESET, all capitals, no spaces. Check Caps Lock.

TODO[PT] [If something goes wrong] “PRE-RESET BACKUP FAILED”: the safety backup could not be saved, so the reset did not happen and nothing was deleted. Do Task 8 by hand, then try again.

TODO[PT] Task 10 — When a sale fails because the internet dropped

TODO[PT] Your shop lives on the internet. Every sale is recorded on the internet the moment it happens. If the internet drops in the middle of a sale, the sale cannot finish. Here is exactly what happens, and what to do. Good news first: **nobody is charged**, and **your cart (what the customer is buying) stays on the screen**. Nothing is lost.

Passo 1. TODO[PT] Read the message on the screen. It will say the shop could not be reached, and the sale did not go through.

■ Screenshot — TODO[PT] The “could not reach the shop” message at checkout
Capture d’écran — TODO[PT] The “could not reach the shop” message at checkout

(task10-saleerror.png — added when the final app is ready / ajoutée quand l’appli finale est prête)

Agora você deve ver: TODO[PT] your cart is still there, with every item, exactly as it was.

Passo 2. TODO[PT] Check the Wi-Fi: look for the fan-shaped icon on the device. If it is missing or has an “!”, the device lost the internet.

Passo 3. TODO[PT] Wait for the internet to come back (the icon returns). This can take a minute after an outage.

Passo 4. TODO[PT] Tap **Retry** (or complete the sale again, the same way as Task 4).

Agora você deve ver: TODO[PT] the receipt, like a normal sale. The sale is recorded once — retrying does not charge twice.

TODO[PT] [If something goes wrong] If the customer cannot wait: there is no “offline” selling — a sale that never reached the internet simply never happened. Write down what they bought on paper if you like, and ring it in when the internet returns.

TODO[PT] [If something goes wrong] If sales keep failing for a long time, the problem is the internet connection or the shop’s server — not the till. Tell the person who installed the shop.

TODO[PT] More parts of the shop (in plain words)

TODO[PT] The Catalogue

TODO[PT] The **Catalogue** is your stock list: what you have, how many, and where it sits on the shelf. It is a different list from the Point of Sale products (Task 3). Something in the Catalogue marked “in store” can be scanned straight into a sale. You can also add many items at once from a spreadsheet file (this is called a CSV file), and look items up by their barcode/ISBN number. Donations, fair days

and special orders (a customer asking you to order something in) each have their own simple flow.

TODO[PT] Appointments

TODO[PT] **Appointments** is a booking book: customers book a time, and two bookings cannot take the same time by accident.

TODO[PT] Classifieds — your shop's buy-and-sell board

TODO[PT] **Classifieds** is your shop's own classified-ads board, like a small Kijiji built into your store. Create ads with photos, a price and a description; mark them For sale, Free, Services, Wanted, Jobs, Events or Announcements. Published ads appear on your public storefront, where buyers can save them as favourites.

TODO[PT] My listings — free ads for everyone

TODO[PT] Anyone can post **free** local ads — no shop needed. Open **My listings** and post with photos and a price. Free accounts can keep up to 15 ads active and post up to 5 new ads a day; ads stay up for 60 days and can be renewed.

TODO[PT] Locked out? Get back in without email

TODO[PT] You never need email to recover your account. At sign-up you receive **recovery codes** — one-time codes to keep somewhere safe. On the sign-in screen, choose “Forgot password?” then “Use a recovery code” to set a new password. You can also set **security questions** in Settings — Account.

TODO[PT] Files

TODO[PT] **Files** keeps your documents and pictures in the shop, and you can search the words inside them.

TODO[PT] Certificates — the staff time clock

TODO[PT] Staff clock in and out with their own secret number (a PIN — a short number, like a bank card's). Managers can fix a punch, make the schedule (two shifts for the same person cannot overlap), and print attestations — signed papers that prove someone's hours. Volunteer/community hours are kept separate from paid hours. Team members are invited with a code and have a role: Owner (can do everything), Manager (almost everything), Cashier (sells).

TODO[PT] Taxes — read this before your first real sale

TODO[PT] **A new shop charges no tax at all** until you set it up. That is on purpose, so nobody is charged the wrong tax. Before selling for real, ask your accountant (the person who does your taxes) two things: what tax percentages apply where you are, and whether each tax is calculated on the price alone, or on price-plus-the-other-tax. Then, in the Point of Sale settings, type those numbers in, and press **Save**. The shop never changes tax numbers by itself. Some organizations pay no tax: they can be marked tax-exempt so their receipts show no tax.

TODO[PT] Other settings

- TODO[PT] Colours and light/dark: Settings · Appearance.
- TODO[PT] If someone else changes a setting on another till, your screen picks it up within about a minute. If you are in the middle of typing in a form, your typing is never erased by that.
- TODO[PT] When a newer version of the shop is ready, a small message invites you to refresh the page. Nothing is forced on you mid-sale.

TODO[PT] When something goes wrong

TODO[PT] This shop is built to fail politely: it explains, it never shows a blank page, and it never silently loses a sale. Here are the bad moments we know about, in plain words.

TODO[PT] The shop cannot be reached at opening

- TODO[PT] Before opening, the shop checks itself. If its own connection settings look wrong (for example a cut-off key), the screen says the setup looks wrong and that no password will work until whoever installed the shop fixes it. If the settings are fine but the server does not answer, the screen says that instead. Either way there is a **Retry** button — tap it once the internet is back.

TODO[PT] One part of the shop stops working

- TODO[PT] Each part of the shop is walled off from the others. If one part breaks, only that part shows a message, with a **Retry** button and a short code (like RS-9K2Q1-4F2A). Write the code down and tell whoever looks after the shop — it points straight at the problem. The rest of the shop keeps working. If the shop breaks three times in a row while opening, it starts in a safe mode with repair options instead of breaking again and again.

TODO[PT] Dangerous buttons protect you

- TODO[PT] Before anything destructive (deleting, voiding a gift card, removing a time punch), the shop quietly saves a small safety copy on the device — the last 3 are kept. That is a safety net, not a backup: still do Task 8 regularly.

TODO[PT] Getting help

- TODO[PT] Open **Help & Guide** from the Start menu (the Start menu is the main menu button of the shop) — this guide lives there too. From the sign-in screen, you can also send a support message.

TODO[PT] Honest limits — what this shop cannot do

TODO[PT] We would rather tell you the limits than let you discover them. Here they are, plainly.

- TODO[PT] **No internet, no selling.** There is no offline mode on purpose: a sale is only real once it is recorded on the internet. (Task 10 shows what happens.)
- TODO[PT] **The public page is a shop window, not a website.** Its look is fixed, and customers cannot buy or pay on it. For a full custom website, you need a website tool as well.

- **TODO[PT] Loyalty points are “best effort”.** If the power or internet dies at the exact split second between recording a sale and adding points, the sale is safe but the points might not be added.
- **TODO[PT] Brand-new gift card glitch (rare).** If a gift card is sold and the internet drops at that exact moment, the recorded sale can end up pointing at a card that was cancelled during cleanup. If a customer says a brand-new card does not work, look in History first — a manager can void that sale.
- **TODO[PT] Your sign-in lives in the browser.** Whoever can open your unlocked browser on your device is, in practice, signed in as you. Sign out on shared devices. There is no list of “which devices are signed in”: signing out works on that device, and if the master account resets your password, you are signed out everywhere at once.
- **TODO[PT] Safety copies live on the same device.** If the device is lost or wiped, they are gone. Your downloaded backup file (Task 8) is the copy that lives elsewhere — keep it.
- **TODO[PT] Taxes start at zero.** Until you set them (see “Taxes” above), no tax is charged at all. Ask your accountant before real selling.

TODO[PT] Appendix — Installing on your own backend (technical)

TODO[PT] This appendix is for the person installing the shop the very first time. It is the only technical part of this guide. If someone installed the shop for you, you can skip it.

Passo 1. TODO[PT] Create a free project at supabase.com (Dashboard — New project). This is the shop’s “cloud”: where everything is saved.

Passo 2. TODO[PT] Open the SQL editor and run every file in supabase/migrations/ in order, from 001 to the latest. One of them (056) creates the built-in master account (admin / admin123, see Task 1); another (057) adds the factory reset; 063 adds the public storefront page tables.

Passo 3. TODO[PT] Copy the project URL and the anon key (Project Settings — API) into a .env file as VITE_SUPABASE_URL and VITE_SUPABASE_ANON_KEY (see .env.example).

Passo 4. TODO[PT] Run: npm install, then npm run build. Put the dist/ folder on any static host.

Passo 5. TODO[PT] Open the shop and do Task 1 immediately — change the master password before anything else.

- **TODO[PT] Rebranding note:** the master account’s email must match BRAND.accountsDomain in src/lib/brand.js. If you change the domain, update the email in migration 056 before running it (plain usernames are turned into <username>@<domain> at sign-in).

TODO[PT] Closing line

TODO[PT] Venda — step-by-step guide. The words on the screen always win over this guide.

Vendra — step-by-step guide. The words on the screen always win over this guide.

Vendra — guide étape par étape. Les mots à l'écran ont toujours le dernier mot sur ce guide.
